The Industrial Diversification of Multi-Establishment Manufacturing Firms

The Meaning, Uses and Limitations of the Unemployment Statistics

Statistics Canada Statistique Canada

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer print-outs. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
--	amount too small to be expressed
-	nil or zero.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 3, Table 1.7 – Income and Expenditure Accounts

This publication contains summary results of the Gross National Product and its major components for the first quarter of 1972 and corresponding quarterly data for preceding years. The data form part of a major historical revision of previously published series, which cover the years 1947 to 1971 inclusive.

The following series have been added to the Government revenue and expenditure accounts:

(1) Investment income – Quebec Pension Plan
(2) Current expenditure on goods and services – Canada Pension Plan
(3) Current expenditure on goods and services – Quebec Pension Plan
(4) Interest on the public debt – Hospitals

Section 3, Table 3.1 – Financial Flows

Data for the fourth quarter 1971 and supplementary tables covering revised fourth quarter 1970 and for the years 1970 and 1971 were published in the May issue of this publication.

Section 3, Table 4.1 – Canadian Balance of International Payments, Current Account, All Countries

Taxes withheld on service payments and income distributions to non-residents are now included with service payments. The receipt of these taxes by Canada are recorded as a transfer from non-residents under non-merchandise receipts. Thus, although under this changed treatment both non-merchandise payments and receipts are higher by the amount of taxes withheld, the current account balance remains unaltered. The change does, however, facilitate comparison of balance of payments data with the external sector in the national income and expenditure accounts. The tax estimates have been obtained from an analysis of government revenues rather than by a direct correlation to the payments to non-residents from which they are deducted. They have not been distributed bilaterally.

Section 4, Table 2 – Wages and Salaries, by Industry

Estimates of labour income have been revised from 1947 to date. The revisions were made mainly to (a) incorporate the 1966 Census of Merchandising and the latest annual survey results, (b) incorporate new estimates for undercoverage in the data sources and (c) convert data from 1947 to 1950 to the 1960 Standard Industrial Classification. Revised annual and monthly data by industry and annual data for the provinces are now available for the entire period. Monthly data for the provinces will be available in September 1972.

Section 12, Table 6 – Shipping and Canal Traffic

As a result of a great deal of duplication between Statistics Canada "Canal Statistics" and the statistical work of the St. Lawrence Seaway Authority, collection of "Canal" data was discontinued effective January 1, 1972.

Series published in the Canadian Statistical Review form part of larger data blocks which are available in machine readable form for use on computers, or in printouts, from the Statistics Canada computerized time series bank (CANSIM). For all series in the data bank, current and revised data are entered immediately on release. Approximately the 10th of each month a special Canadian Statistical Review public tape is created which contains historical and current data for all series in the Review, plus some supplementary series.

Inquiries concerning either this Review or CANSIM may be directed to the General Time Series Staff, Statistics Canada.

THE INDUSTRIAL DIVERSIFICATION OF MULTI-ESTABLISHMENT MANUFACTURING FIRMS

A DEVELOPMENTAL STUDY

J.S. McVey*

This article discusses the development, application, and assessment of several different concepts of manufacturing business enterprises, using establishment data from the annual Census of Manufactures and published information on inter-corporate ownership.

The use of the Herfindahl·Index as an inverse measure of industrial diversification is developed and discussed as a tool for assessing the difference in the degree of industrial diversification of these different concepts of enterprises for 1968. On the basis of this index, companies were found to be less diversified than enterprises in 1968. A comparison was also made between manufacturing enterprise diversification in 1968 and 1965 and it was found that there was virtually no change in diversification over this period using this method of measurement. A positive relation was found between enterprise size and diversification when considering groups of firms. The largest 25 enterprises in 1968, measured by manufacturing value added, were more diversified than the next largest 25, and they in turn were more diversified than the next 50 largest enterprises, but there was no linear relationship between enterprise size and diversification amongst the top 25 enterprises in 1968.

Further research is planned on the relation between diversification, growth, and industrial concentration, as well as the extension of the study of diversification to a commodity basis.

Introduction

Students of industrial organization are interested in understanding the modern large business enterprise including such issues as its growth and industrial diversity, which are generally thought to be increasing. As enterprises grow they have several growth possibilities or avenues open to them. They can, via merger or through internal growth, expand within the areas of their present industrial activity (horizontal diversification), or they can extend themselves forward or backward in their production and distribution chain (vertical integration). A further growth possibility has been called conglomerate diversification, and involves growth in areas unrelated to the present industrial activity of the enterprise. Many believe that such truly unrelated growth is actually a fairly rare phenomenon, since seemingly unrelated expansion often "fits" into some common present activities of the enterprise, such as a common production process or set of customers, though the activity is classified to a different industry. These growth possibilities are not mutually exclusive and can be extended beyond the borders of a single nation state, as testified to by the current increased interest in the multi-national firm.

The present study is aimed towards obtaining some quantitative impressions of business enterprises and their diversification. It is correctly titled a developmental exercise because it is only part of what will hopefully be a continuing study of business enterprises. This project is modest in the sense that it investigates the three-digit industrial diversification of enterprises within the manufacturing industries of Canada. It should be noted that it is industrial (as opposed to product) diversification which is under investigation. Presumably a four-digit level of industry detail would show somewhat greater diversification. There is no attempt made to distinguish the significance of the different possible types of diversification outlined previously. Such a treatment is beyond the scope of this present preliminary project and awaits further work. The second item to be noted is that this is a study of enterprises within the domestic manufacturing industries only. It is recognized that some (and most of the larger) enterprises could have activity in several different industrial sectors and countries in addition to their Canadian manufacturing activity. The above qualifications should be kept in mind in interpreting the results given here.

The Concept of a Business Enterprise

Before measuring the diversification of enterprises we must define what will be treated as an enterprise, and the measures that will be used to measure industrial diversification. This project compares enterprise diversification in 1965 and 1968. This study is also really an investigation of the effect of using different enterprise concepts. Theoretically, an enterprise should comprise all companies under common control. The difficulty has been in obtaining information on all types of corporate control. A substitute or proxy has been used

THE MEANING, USES AND LIMITATIONS OF THE UNEMPLOYMENT STATISTICS

Peter Hicks*

The unemployment rate is one of the most closely watched statistics in Canada. Unemployment is a phenomenon that affects the lives of many Canadians and it is not surprising that the figure which summarizes the unemployment situation in Canada each month receives so much attention. However it must be remembered that the unemployment rate is only a summary figure and summaries, while they are essential for many purposes, cannot reveal the whole picture.

The first part of this note examines the measure itself, who are included as unemployed and who are excluded. The second part examines the uses and limitations of the unemployment data. This section describes some of the factors which can cause month-to-month movements in the rate and lists some of the supplementary data produced by the Labour Force Survey which can be used for a more meaningful and complete interpretation.

Who are the Unemployed?

From time to time, statements are made that the monthly unemployment figures are too high because of the inclusion of marginal groups such as housewives or students. At the same time, conflicting claims are made that the figures are too low because of the exclusion of persons who have given up job seeking either because of some disability or because of discouragement. What then do the unemployment data actually measure?

There would be broad agreement among both statisticians and the man in the street that a common sense definition of an unemployed person would be a person who:

(i) is without work;
(ii) and has an immediate interest in finding work;
(iii) and would be available for suitable work if found.

This is the concept that lies behind the monthly unemployment statistics. But concepts, if they are to be used to produce statistics, must be operationally feasible. What this means is that it is necessary to:

(i) devise a set of questions and definitions which allows the statistical agency to collect data easily, accurately, and consistently;
(ii) have criteria and procedures that are simple enough to be routinely applied in the context of a large-scale field survey;
(iii) set a time frame that is practical and reasonable.

Using these criteria, Statistics Canada developed a survey in which individuals are asked general questions about their activity in the preceding week. The replies are coded into the following categories by interviewers: worked; looked for work (includes persons who indicate they would have looked for work except that they were ill, were on prolonged layoff, or believed no work was available in the community); had a job but not at work (illness, vacation, temporary layoff, etc.); permanently unable to work; kept house; went to school; retired or voluntarily idle; or other. These coded replies are used to determine whether a person is employed, unemployed, or not in the labour force. An unemployed person is one who, in the reference week:

(i) was without work, and
(ii) demonstrated an immediate interest in work, either by actively looking for work or indicating that they would have looked for work except for special circumstances,
(iii) or, were temporarily laid off from their jobs.

The employed are those who worked in the reference week, even for only a few hours, plus those who had a job but were not at work due to illness, vacation, etc. The sum of the employed and unemployed is known as the labour force. The unemployment rate is a summary measure which shows the unemployed as a percentage of the labour force. The participation rate is a measure which shows the labour force as a percentage of the population aged 14 and over.

A period of one week was chosen for the survey reference period because it is short enough to be easily recalled by most respondents. A reference period of one day would give statistics which would tend to be unduly irregular.

The survey was started in Canada in 1945 on a quarterly basis and switched to a monthly basis in November, 1952. It is a carefully-designed sample of some 30,000 households which are visited by about 800 labour force interviewers each month. A questionnaire is completed for each member of the household 14 years of age and over, giving a total of over 70,000 questionnaires each month. Excluded are persons in the armed forces, and persons living in institutions, in the Yukon and Northwest Territories and Indians living on reserves. A selected household remains in the sample for six consecutive months. The rotation is staggered so that one sixth of the households are new to the sample each month. As well as the activity data mentioned earlier, data are collected on age, sex, marital status, family status, industry, duration of unemployment, full-time or part-time work status, etc. Tables based on these data are published monthly in *The Labour Force* (Catalogue 71-001). Because of the need for personal interviews, the survey is expensive to conduct. The current budget is over $2,000,000 a year.

(Continued on page 118)

---

*Mr. Hicks is Assistant Director for Labour Market Statistics, Labour Division, Statistics Canada.

by employing information on inter-corporate ownership of voting stock. This still leaves some questions regarding how to recognize the existing cases of minority control.

In an attempt to deal with this issue, a study was undertaken by Dr. Gideon Rosenbluth during the summer of 1971 when he was employed at the bureau in a consulting capacity. Two different enterprise concepts were chosen for this investigation. Under Concept 1, all businesses for which there were ownership ties of greater than 50% were grouped into enterprises, while under Concept 2 these groupings were broadened by including in a given enterprise certain additional businesses which were only minority owned. Both concepts were applied to 1967 inter-corporate stock ownership data compiled by the Corporations and Labour Unions Returns Act Division (CALURA), and the resulting codes were transferred to various sources of 1968 data. The two concepts were set at two extremes or poles in order to attempt to assess empirically the potential significance of minority control situations. For an explanation of the CALURA data the introduction to the publication *Inter-corporate Ownership 1967*, (Catalogue 61-508), should be consulted.[1] Basically, stock ownership information is available for most corporations with assets over $250,000 or gross revenue exceeding $500,000. Information on smaller sized multi-company enterprises and corporate stock holdings by individuals is not currently available in a readily usable form, but hopefully is not of great quantitative significance in relation to the information which is available.

The two concepts were as follows:

Concept 1

Concept 1 was a legal control approach which grouped all companies for which ownership links of greater than 50% existed, either directly or indirectly.

Concept 2

Concept 2 was a broader approach in the sense that it linked all companies that Concept 1 did, and in addition, it linked certain minority corporate interests where there was no majority interest present.

(a) **Case where there was only one minority interest**—Specifically, Concept 2 joined companies where the ownership link was as low as 10%.

(b) **Case where there were several minority interests**—As well, Concept 2 treated cases where there were several different minority interests in a certain company. If the largest minority interest's shareholding was greater than any other minority interest's shareholding by 20% or more of the company in question, then the company was linked with this enterprise. This percentage difference referred to was computed by simply subtracting the two minority interests' percentage stakes in the company in question. If the largest minority interest's share of the unit was not 20% or more than the next largest minority interest's share, the company was not linked with any other enterprise, but was treated, instead, as a separate business enterprise, on its own. By way of example, if one minority has a 25% interest in a firm, another minority interest would have to be at least 45% for the unit to be treated as part of this second enterprise. If the larger minority interest had in this case been only 40%, the differential between the two minority shares in the unit is only 15%, and as a result this business unit would be treated as a separate enterprise for our purposes. Thus Concept 2 contained the majority control situations contained in Concept 1, and added certain cases of implied minority control as well.

Certain information on company diversification has also been included to permit a comparison of the diversification between enterprises and companies in 1968 where use of the term "company" means a strict legal entity. These two enterprise concepts and the strict company approach were all applied to the data for the year 1968 as was mentioned earlier.

In order to assess the change in diversification over time, it was possible to make further use of the enterprise code developed for the 1965 study, "Concentration in the Manufacturing Industries of Canada".[2] The Concept 1 enterprise used for 1968 data is very similar to the enterprise definition used in the 1965 study of concentration. The latter employed 1965 CALURA inter-corporate stock ownership data,[3] but was supplemented by information on acknowledged control. This was obtained from the files of the Merger and Monopoly Branch of the the Office of the Director of Investigation and Research, Combines Investigation Act. The 1965 enterprise was equivalent to implementation of the 1968 Concept 1 with the further linking of legal entities where a sample of large companies replied indicating they "controlled" certain other companies although they may have had less than 50% of the voting stock. The precise impact on the 1965 data of this acknowledged control through minority holdings would be difficult to assess because acknowledged control would be asserted for situations of majority control also. In the 1968 study, similar information on acknowledged control was not available and this makes it somewhat more difficult to compare the change in diversification over time. It is believed, however, that even without this information, a fairly close comparison between the two series is still possible.

SELECTED ECONOMIC INDICATORS–SEASONALLY ADJUSTED

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2.3)

The seasonally adjusted index of industrial production increased by 2.1% in April from the upward revised level of 184.4 in March. Mining and manufacturing both registered increases. Both durables and non-durables manufacturing output grew strongly with the durables increase particularly strong. The output of electric power, gas and water utilities decreased.

	total industrial production (1961=100)	manufacturing (1961=100)			(1961=100)

INCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

Preliminary estimates indicate continued growth in the nation's output of goods and services. GNP rose by 2.2 per cent in current dollars and by 1.1 per cent in constant 1961 dollars. A feature of demand was the large increase in inventory investment. The most noteworthy development on the income side was an accelerated gain in labour income.

Current account transactions continued to deteriorate producing a deficit of $367 million in the first quarter of 1972. This decline was due largely to the upsurge in merchandise imports.

	gross national product[1]		personal expenditure on goods and services	business gross fixed capital formation	labour income	corporation profits before taxes[1,2]	balance of international payments

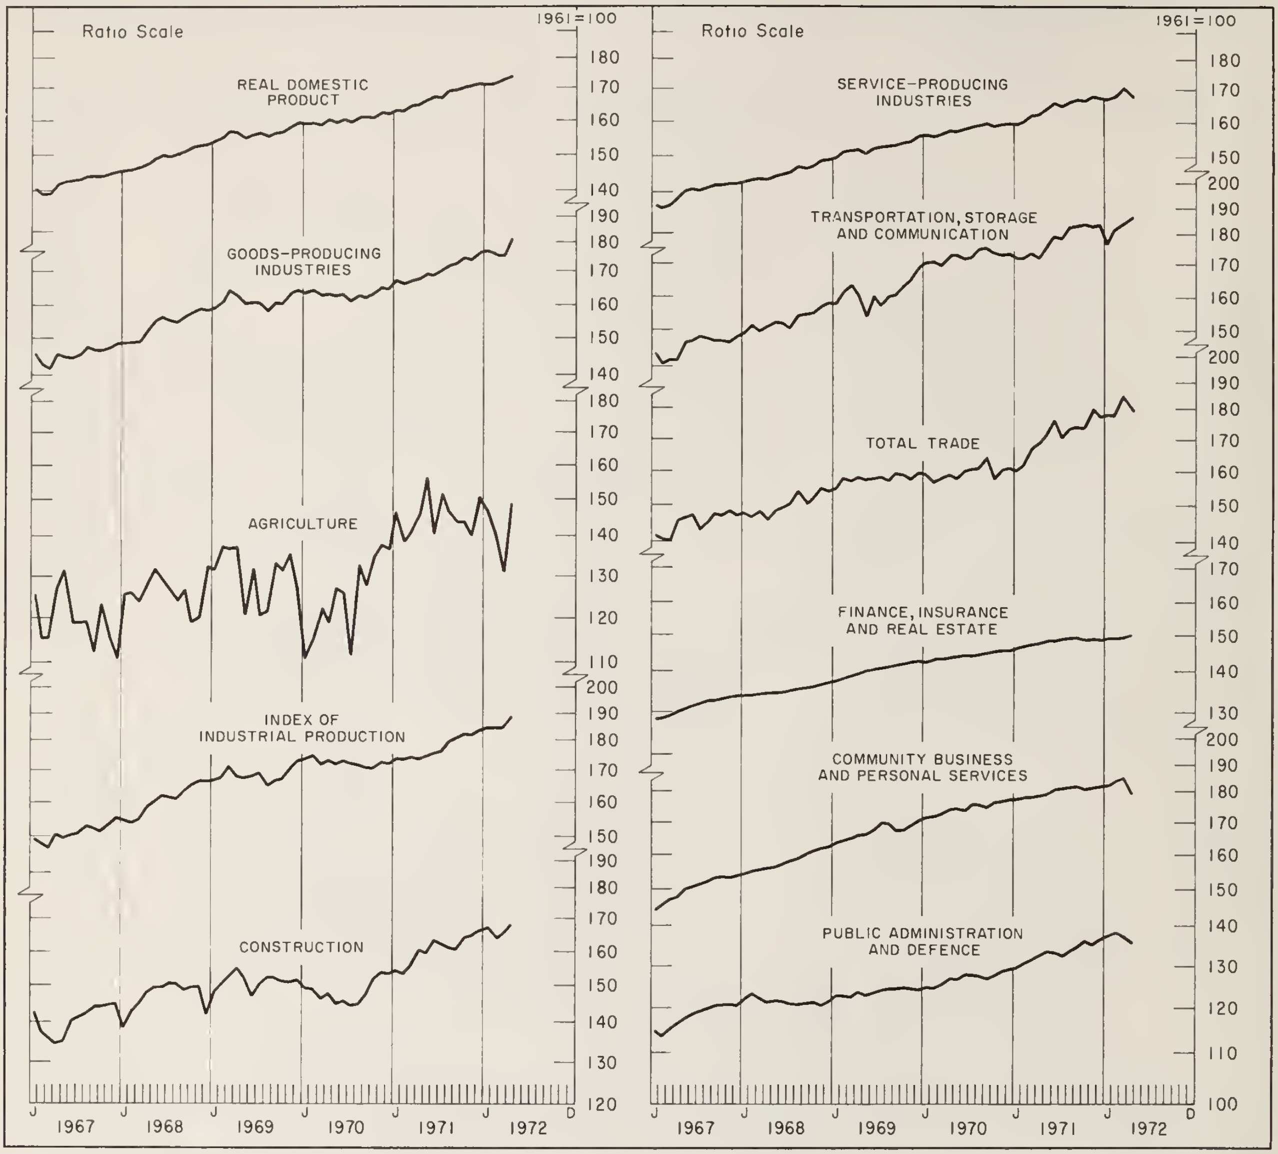
SELECTED ECONOMIC INDICATORS–SEASONALLY ADJUSTED

REAL DOMESTIC PRODUCT, (More details in Section 3, Table 2.1)

The April increase of 0.6% was dominated by a very strong increase in Manufacturing and a sharp rise in Agriculture. The strike of provincial employees in Quebec was a major dampening factor.



real domestic product, by industry of origin, volume indexes (1961=100)

PRICES (More detail in Section 5; 13; respective Tables 2, 3 & 4; 8.)[1]

The Consumer Price Index rose 0.1% between April and May mainly because of a 0.6% advance in Services. Non-durables excluding food and Durables rose 0.2% and 0.1% respectively while food prices decreased 0.7%.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

Table 2.3: industrial production, volume indexes (1961 = 100), based on the 1960 standard industrial classification – continued

year and month	durable manufacturing															
	primary metal industries					metal fabricating (ex mach. & transportation equipment)							machinery (except electrical)	transp. equipment		
	total	iron & steel mills	steel pipe & tube mills	iron foundries	smelting and refining	total	boiler & plate works	fabricated structural metal	ornamental & architectural metal	metal stamping, pressing & coating	wire & wire products	hardware, tool & cutlery		total	aircraft and parts	motor vehicles[1]
	1961 industry weights

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and other short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error.

[2] The labour force as a percentage of the population 14 years of age and over.

[3] The unemployed as a percentage of the labour force.

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7.

[2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other.

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001), Statistics Canada.**

---

[1] Persons who have applied for or are in receipt of unemployment insurance benefit at end of month. [2] Annual figures are annual averages. [3] Prior to July 1971, total includes ordinary, seasonal and fishing benefit. [4] Commencement of new Unemployment Insurance Act. **Source: Statistical Report on the Operation of the Unemployment Insurance Act (73-001).**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities.** Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. [3] The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home ownership costs. [4] Indexes for Quebec City and Thunder Bay are on the (1969 = 100) base. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month						ratio of inventories owned to shipments
				owned[3]	held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders In Manufacturing Industries (31-001), Statistics Canada.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), Statistics Canada.**

---

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry.

[1] Production plus imports less re-exports, minus exports. [2] Data for 1969, 1970 and 1971, have been revised and are shown here for the first time. Full details will be shown in **New Motor Vehicle Sales, 1971** (Cat. no. 63-208). [3] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities, **does not include imports.** **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Permits (64-001), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. [2] From January 1972 includes Yukon and the North West Territories. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month.The remainder of the country is covered on a sample basis quarterly. **Source: New Residential Construction (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1970 and 1971 price indexes are subject to revision. [3] 1971 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

---

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.

[2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months.

[3] Includes baking and frying oils and fats.

[4] Includes stocks held by manufacturers and other warehouses.

[5] Includes fresh sausage, frankfurters, weiners and all other sausage.

[6] Includes solid, coated, bulk, packages and novelties.

[7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals due to rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges: for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. [4] Personal cash loans of up to $1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. [6] The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. [7] Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. [8] Bills due for residential/domestic use of telephones, gas and electric power. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

year and month		total railway revenue freight loadings (carload and non-carload) (000 tons)	total revenue cars loaded (carload only)	farm products and food						mine products				forest products		
				wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash[2]	coal, sand, cement and other mine products	lumber and plywood	pulpwood	other forest products

[1] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [2] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.**

[1] Includes Class 1 carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [2] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight (53-005) quarterly, Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, Statistics Canada.**

---

[1] Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. Note: Nordair was put into Financial Level II (from III) in January 1970 i.e. 1969 and previous dates do not include Nordair. **Source: Civil Aviation (51-001), Statistics Canada.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Total of foreign funds, short term foreign investments, and other foreign currency assets less foreign currency liabilities. [7] Excluding Canadian day-to-day loans. [8] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [9] Loans to grain dealers and exporters. [10] Loans to finance purchase of Canada Savings Bonds at time of issue. [11] Including loans to instalment finance companies. **Source: Bank of Canada Review.**

[1] Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2] Total new settled-for ordinary sales in Canada. [3] Total sales figure does not include sales for Northwest Territories. [4] Under new or amended contracts. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Connecticut, U. S. A.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, Statistics Canada.**

The Industrial Diversification of Multi-establishment Manufacturing Firms – Continued

The Measurement of Diversification

Several different possibilities exist for measuring diversification. An obvious though somewhat rudimentary method is simply to count the number of different industries an enterprise operates in. This direct measure of diversification is often resorted to as a proxy when data do not exist to permit a more refined measure. Because the Annual Census of Manufactures' data is used, the establishment is the basic unit which is grouped into enterprises. In the manufacturing industries, each establishment is classified to the industry in which the greatest proportion of its commodity output is primary, since in practice each industry is normally associated with a set of principal or primary products.[4] It is recognized, however, that most establishments have an internal product diversification and that this may be changing independently of the enterprise's changing industrial diversification, but we are not able to measure this commodity aspect of diversification at the present. Another approach, used by Gort, has been to measure the proportion of a firm's output which is produced within its largest or primary industry.[5] The higher the percentage of secondary industry production, the more diversified the firm is said to be.

The approach used in this study is one that involves an application of the Herfindahl Index to the measurement of diversification. The Index has been mainly used in measuring industrial concentration, but can be fruitfully utilized in measuring diversification. When it is used as a diversification measure, it is an inverse index of diversification. This approach was developed for measuring industrial diversification and was used internally within the bureau in early 1971. It has also been employed independently by Dr. C.H. Berry in measuring product diversification of large enterprises in the United States.[6] The Herfindahl Index is simply a special type of weighted average.[7] As applied to the measurement of industrial concentration it is a weighted average of the industry or market shares of the firms in the industry, where the individual market shares are used as the weights, as well as being the object of the weighting. If we now think of the various industry components as shares of the total manufacturing enterprise and we use manufacturing value added as the measure of the components, a Herfindahl Index can be computed for each firm by simply squaring each of these industry shares of the firm and adding them up. If we designate the index by the symbol H, and the individual industry components or shares by s, and consider a firm that has activity in n different three-digit industries, we can write the index as follows:

$$H = \sum_{i=1}^{n} s_i^2 \text{, where } \sum_{i=1}^{n} s_i \equiv 1 .$$

Thus if the firm is not diversified at all, n = 1, s = 1, and H = 1. At the other extreme, if the firm is spread equally among many different industries its share in each such industry is 1/n, and

$$H = \sum_{i=1}^{n} s_i^2 = \sum \left(\frac{1}{n}\right)^2 = n \cdot \frac{1}{n^2} = \frac{1}{n}$$

As n becomes large, H approaches its lower limit of zero, signifying complete diversification. For example, firms spread equally among 2, 3, 4, and 5 different industries will have H values of 0.50, 0.33, 0.25, and 0.20 respectively. Thus an index value of 0.33, though it can be achieved in several different ways, can be interpreted as the comparable amount of diversification that would result if a firm were evenly diversified among three different three-digit industries.

The advantage of this measure is that it is a summary measure that sensitively reflects the actual quantitative distribution of a firm among industries, rather than merely the number of industries the firm produces in. As Berry notes, if 99% of a firm's output is in its primary industry, the fact that it operates in several other industries on a very minor scale is misleadingly shown by counting industries. The Gort method is also inferior to the Herfindahl Index because it does not reflect at all the industrial distribution of the secondary activities of the firm. With the Herfindahl Index, if two firms both have 50% of their output in their primary industry, but one has its remaining output equally split among two other industries, while the other has its secondary output spread equally among three or more industries, this second firm will receive a lower value of the Herfindahl Index than the other, and as a result will show as being more diversified, since this index is an inverse measure of diversification.

Statistical Results

Specified Types of Manufacturing Enterprises (Table 1)

In order to assess the scope of the industrially diversified manufacturing enterprises, the Census of Manufactures' data for 1965 and 1968 were subdivided into three different types of enterprises. These statistics are contained in Table 1. It is noteworthy that in both years and with both enterprise concepts in 1968, the multi-industry enterprises are under 2% of all enterprises in terms of numbers, and contain on the order of 10% of all manufacturing establishments, and yet they account for approximately 50% of the manufacturing value of shipments and value added. It is recognized that some of the single-establishment enterprises are possibly part of enterprises that have activity in other sectors than manufacturing, but we designate them in this way because we are only dealing with the manufacturing sector. In comparing the two different enterprise concepts for 1968, Concept 2 multi-establishment enterprises are virtually the same proportion of the universe as are the comparable type of Concept 1 enterprises. Finally, type A and C enterprises seem to account for a slightly greater proportion of the universe in 1968 than in 1965.

Industrial Diversification (Table 2)

To illustrate the use of the Herfindahl Index as a measure of diversification, values of this index were computed for all multi-establishment firms for the two years. The industry components or shares were measured by using manufacturing value added as the indicator of the relative importance of the different industries within a firm. The firms were grouped according to their resulting Herfindahl Index values, and the results are shown in Table 2. Approximately 50% of all multi-establishment firms for both years are single-industry firms and as a result have Herfindahl values of 1. These correspond to type B firms in Table 1. There are 85 enterprises in 1965 that have Herfindahl Index values less than 0.50. These enterprises have 23.4% of the establishments, 22.6% of the manufacturing shipments, and 24.3% of the manufacturing value added of all the multi-establishment enterprises for that year. In 1968, there are 116 such Concept 1 enterprises and 124 such Concept 2 enterprises, and they have 24.2% and 28.3% respectively, of all multi-establishment enterprise manufacturing value added. The 63 such companies in 1968 have only 17.9% of all multi-establishment companies' value added. Thus it seems that there are more highly diversified enterprises in 1968 than highly diversified companies, as would be expected. Concept 2 enterprises appear to be slightly more diversified than Concept 1 enterprises, again not surprisingly because of the previously explained difference in the two concepts.

Diversification of the Largest Enterprises (Table 3)

The largest hundred enterprises, using manufacturing value added to measure size, were assembled for the two years and the results are summarized in Table 3. It is interesting to note that in 1968 there were only 6 single-industry (Concept 1 or Concept 2) enterprises among the leading 50 enterprises, and only 2 of these 6 were single establishment enterprises. Within the next 50 largest enterprises there were 10 single-industry firms, and 5 of these were single establishment firms. The leading 16 enterprises were all diversified enterprises. It is noted that, when using both the average number of three-digit industries per enterprise and the weighted average of the Herfindahl values, the top 25 enterprises showed more diversification on average than the next largest 25 firms, and they in turn showed more diversification than the last fifty. Thus, on this broad division, the two measures gave consistent results, and they also indicate that the larger enterprises tended to be more diversified on the average. The Concept 2 firms showed more diversification than the Concept 1 firms for 1968, as can be seen both from the average number of industries per firm and the Herfindahl averages for selected groups of these large enterprises.

In another attempt to summarize the differences in diversification between the two concepts and between the two years, a weighted average of the Herfindahl Indices of all the multi-establishment enterprises was computed, using manufacturing value added as weights. The weighted average Herfindahl Index was 0.657 for 1965 firms, 0.665 for Concept 1 firms in 1968, 0.643 for Concept 2 firms in 1968, and 0.746 for companies in 1968. These three enterprise figures were not significantly different, but companies were clearly less diversified than enterprises.

Interestingly, when enterprise size (again measured by manufacturing value added), the number of industries per enterprise, and the enterprise Herfindahl Index were compared for the leading 25 enterprises in a given year, there was found to be virtually no linear relationship between size and diversification using either measure of diversification. The pairwise correlation coefficient between size and the Herfindahl Index was −0.184 in 1968 (Concept 1), and exactly zero in 1965. The correlation between firm size and the number of three-digit industries per enterprise was −0.034 in 1968 (Concept 1) and −0.106 in 1965. There was a negative correlation between the enterprise Herfindahl Index and the number of industries per firm of −0.819 in 1968 (Concept 1) and −0.687 in 1965, which is to be expected since the Herfindahl Index is an inverse measure of diversification.

Summary

The study has not shown an appreciable difference between diversification as measured by the two different enterprise concepts in 1968, nor does it seem that there has been a large change in diversification between 1965 and 1968, but this is not too surprising since this is a fairly short time span. It is hoped that this preliminary study has been successful in its attempt to describe the extent of industrial diversification within the manufacturing sector. Much work still remains to be done in refining techniques and extending both the internal detail and external scope, if the modern corporate world is to be more fully understood. Further study is planned of the relationships between diversification, enterprise growth, and industrial concentration. It should also be possible to study enterprise diversification on a commodity basis in the near term future.

TABLE 1. Selected Statistics for Specified Types of Manufacturing Enterprises, 1965 and 1968

Type of enterprise	Enterprises		Establishments		Value of manufacturing shipments		Value added

[1] The total activity figures include the head offices, sales offices, and auxiliary units that belong to the related enterprises.

[2] The top 25 enterprises of 1968 Concept 1 have an average of 6.7 three-digit industries per enterprise and a weighted Herf. index of 0.604.

[3] The top 25 enterprises of 1968 Concept 2 have an average of 7.6 three-digit industries per enterprise and a weighted Herf. index of 0.545.

[4] The top 25 enterprises of 1965 have an average of 7.5 three-digit industries per enterprise and a weighted Herf. index of 0.582.

This approach to measuring unemployment conforms with internationally accepted standards. Numerous studies over the past 25 years in different countries and by international organizations have supported this approach and the statistics themselves have proved highly useful in research, analysis, and policy formation. Some European countries that have had more comprehensive administrative data than Canada use administrative files rather than household surveys as a source of statistics, but regardless of the sources, all aim at the same underlying concept. There are, of course, difficulties in using administrative data, especially if conditions regarding payment of unemployment benefit change fairly frequently. Those countries that use administrative data are increasingly turning to labour force surveys to assure that the data are consistent over time and between areas and to obtain the wide range of related data about the labour force that can only be collected from a specially-designed survey. A requirement of the European Common Market, for example, is that periodic labour force surveys be held in each member country.

The long and satisfactory history of the unemployment concept does not mean that changes cannot or should not be made concerning the methods used or concerning treatment of marginal groups. There is no "true" value for the unemployed; the borderlines between employment, unemployment and activities outside the labour force are not always clear in the real world and it is always possible to develop different ways of handling doubtful cases. For example, in 1960 it was decided to change the classification of persons on temporary layoff up to 30 days from the employed group to the unemployed. Possible changes to the existing measure include such areas as extending the coverage of the survey to the northern territories, raising the age limit for inclusion in the survey from 14 to 15 or 16, revising the questionnaire design, developing new techniques of seasonal adjustment, or new computer techniques for linking data between different surveys. Two factors must be remembered when considering the merits of introducing such changes. First, it would be very unlikely that any reasonable revision would result in a dramatic change in the level of the unemployment rate. While the gray areas are many and troublesome, they are still relatively small compared to the number of persons who would be unambiguously classed as employed, unemployed, or not in the labour force under any reasonable classification scheme or method of collection. The second point to note is that most of the important uses of the data require historical consistency and this means that changes in the historic series should be avoided whenever possible. For this reason, small changes are usually saved up and incorporated together as part of a major package of revisions and, ideally, implemented in such a way that it is possible to create historically consistent series. Statistics Canada is now planning a revision of the sample design and of the population estimates using new material collected in the 1971 Census. When this revision is implemented in a few years' time, it may well be desirable to incorporate other changes such as raising the age limit from 14 to 15 or 16, or modifying the questionnaire design to obtain more data.

The statistics then are a statistically-sound measure of the common sense notion of what is meant by unemployment. The survey produces a great deal of data relating to the characteristics of the unemployed that are used to assess the need for programs to reduce unemployment and to assess the effectiveness of those programs when implemented. This includes data on the incidence of unemployment in different age, sex, or marital status groups, data on the location of the unemployed by geographic area, by occupation and industry, and some data on the hardship caused by unemployment as shown by the duration of unemployment statistics or the family characteristics of the unemployed. What is more important for these uses than the level of unemployment per se (so long as the definition used is reasonably in line with common sense) is that the data allow meaningful comparisons over time and among different areas of Canada. That is to say, one wants to know whether the seasonally-adjusted unemployment rate for adult men, for example, is rising or falling, how it compared with rates at similar stages of other unemployment cycles, how the rate in the Atlantic Region compares with the national rate or the rate in Ontario, etc.

For the kind of policy purposes described above, it is the detailed cross-classifications by age, region, etc. that are used rather than the total Canada unemployment rate. Because unemployment is such an important phenomenon, the unemployment data are widely used as a measure of current economic conditions. For this purpose, a single summary figure is very convenient, and this accounts for the widespread attention given to changes in the total unemployment rate. The next section is devoted to the dangers of relying too heavily on this single figure.

Before turning to the limitations of the unemployment rate as a measure of month-to-month change, we will deal with a problem that seems to give many people difficulty – why the total unemployment rate is not a measure of economic hardship. The unemployment statistics were not designed to measure hardship, which is related to income, but rather to measure the match, or lack of match, between the demand and supply of labour. The labour force data, particularly the family data and the duration of unemployment statistics, are useful in studying hardship, along with other information such as income data, but by themselves the unemployment figures cannot be adequate measures of hardship for two reasons:

(i) economic hardship is suffered by the employed (e.g., the working poor), and by those not in the labour force (e.g., the disabled) as well as by the unemployed;

(ii) even within the unemployed there are persons suffering different degrees of hardship and it would be most difficult to arrive at an agreement about what constitutes "real hardship" and, even if that were possible, it would be virtually impossible to measure.

To illustrate this second point, take the frequent criticism that the unemployed figures should not include housewives looking for a job in order to earn enough for a colour television or to get away from the kids for a few hours a week. The idea is that the unemployed should be limited to the real breadwinner in the family. The problems of this approach are shown by the following range of reasons why the housewife might be seeking work:

(i) mainly for social reasons or to get out of the house for a few hours each week;
(ii) mainly to earn enough for a few extra luxuries, such as a colour T.V.;
(iii) mainly to earn enough money to send children to school;
(iv) mainly to assist in purchasing a house in a more expensive district;
(v) mainly to assist in purchasing a larger house because of growth in the size of the family;
(vi) because the husband's earnings are not adequate to support the family in a reasonable fashion;
(vii) because her husband is unemployed and she must be the sole breadwinner.

Where would one draw the "hardship" line? The line would clearly be arbitrary and it is most unlikely that there would be any general agreement on just where it should be drawn. But even if there were a consensus on what constituted "hardship", it would be virtually impossible to measure statistically. It is clear from the example that one would need to collect information on a person's motives for seeking work and motives for working, as well as data on income, assets, etc. The criteria described earlier require that the data be collected easily, accurately and consistently and that the questions can be routinely applied in the context of large-scale field survey. The constraints of these criteria would not allow the collection of data on motivation. In other words, it is not possible to collect consistent and objective information on such a subjective area as a person's motivation for working using a large-scale monthly survey such as the Labour Force Survey.

Factors that can Change the Unemployment Rate

Month-to-month changes in unemployment attract much attention in the media. Unfortunately, emphasis on a single figure is often not warranted. What does it really mean, for example, when the seasonally-adjusted unemployment rate goes up 2/10 of a per cent, from say 5.8 to 6.0? It may mean that a large number of men with families to support lost their jobs and were unsuccessful in finding new work. Or, it may simply be that more students were looking for summer work than has been the case in the past. Or, some part of that increase may be due to an irregularity, such as the indirect effect of a strike. Or, some part of it may have been due to sampling variability or to special difficulties in estimating seasonal influences.

Composition of the unemployed – There are markets in Canada for different types of labour in different areas and changes in the overall unemployment rate are often made up of a number of offsetting movements in these different markets. For example, between May and June, 1971, the unemployment rate fell slightly from 6.3 to 6.2 but this did not mean that there was an across the board improvement. In fact, the unemployment rate rose for persons aged 14-24 but this was more than offset by a decline for persons over 25 years of age. This kind of situation is common when using actual data because of the differing effect of seasonality on the different groups, such as students. However, offsetting movements are also common in seasonally-adjusted data and it is always important to look at the detailed statistics. In the example above, the adjusted unemployment rate stayed the same at 6.3 between May and June, but a regional breakdown shows increases in the Atlantic Region, Quebec and British Columbia, offset by a decline in Ontario.

Also, the total unemployment figure may not indicate changes in the severity of unemployment. The overall unemployment total may decline between two months, but there may have been an increase in the number of persons seeking work for many months, which was more than offset by a decline in short duration unemployment. Or, there may have been changes in the distribution of persons seeking full-time as opposed to part-time work. Details of the component cross-classifications that lie behind the total unemployment rate are published monthly in *The Labour Force* (Catalogue 71-001).

Changes arising from seasonality and irregularity – Changes between different months can be due to seasonal, cyclical or quite irregular events. The actual unemployment rate between April and May, 1972, fell from 6.8 to 6.2. The fact that there was a decline in unemployment between these two months was not surprising. In the 20 years in which the Labour Force Survey has collected these data on a monthly basis, there has always been a decline between these two months as labour market conditions pick up after the winter season. What is of interest is not that the unemployment figures declined between these two months, but how predictable or unpredictable the decline was. The technique of seasonal adjustment has been developed to remove the effect of the usual seasonal changes from the actual data, leaving the non-seasonal changes to be examined and explained.

The process of seasonal adjustment itself has its limitations and these may cause some difficulties in interpreting month-to-month changes as is indicated below. A seasonally-adjusted series is one from which the usual seasonal changes have been removed, thereby leaving behind only those underlying changes which are of a cyclical or trend nature, plus any irregularities that may have occurred in the labour market. Most users of the seasonally-adjusted series are concerned with the basic trend and cyclical movements and regard irregular increases or decreases, which will likely be reversed in later months, as hindrances in the interpretation of the data. Unfortunately, irregular factors play a significant role in the unemployment series. It is estimated, for example, that about 91% of the average month-to-month changes in the unemployment series is caused by the seasonal factors, which can be removed by seasonal adjustment, 6% is caused by irregular factors, and only 3% is caused by the underlying cyclical component which we are trying to measure. This means that month-to-month changes in the seasonally-adjusted series are often dominated by irregular rather than cyclical factors, thus making it necessary to look at the unemployment series over a number of months in order to get a picture that is relatively free from irregular factors. Examples of irregularities that affect the labour force survey are periods of unusual weather conditions or layoffs caused by labour disputes in related industries. (An industrial dispute itself does not directly result in an increase in the measure of unemployment since persons on strike or locked-out are counted as employed, but it can cause unemployment indirectly if, for example, related firms have to lay off men because of a shortage of materials, or if a strike results in the postponement of a seasonal increase in hirings.)

Gross movements – The changes in the unemployment rate between any two months reflect the net change in the number of persons unemployed between those months. That is, each month there are a great number of people who become unemployed and a great number of people, formerly unemployed, who become employed or leave the labour force. So, for example, between April and May, 1972, the figures show that there was a decrease in the unemployment rate from 6.8 to 6.2. This represented a decline in unemployment of 40,000. In reality, this 40,000 drop was the net result of two movements: approximately 210,000 persons became unemployed between these months but at the same time nearly 250,000 persons who were unemployed became employed or left the labour force. The situation is complicated by the fact that there are flows between the unemployed and those not in the labour force, between the unemployed and the employed, and between those not in the labour force and the employed. This is illustrated in the following table which shows the flows between April and May on the basis of those individuals who were in the sample in both months. The numbers in this table are only approximations for illustrative purposes; for technical reasons, the Labour Force Survey cannot produce estimates of gross flows at this time which are reliable enough for monthly publication.

Gross Movements Between April and May, 1972, Based on Matched Samples

Labour force status in April, 1972	Labour force status in May, 1972			
	Total	Employed	Unemployed	Not in labour force
	'000			
Total	**11, 619**	**6, 159**	**392**	**5, 068**
Employed	5, 979	5, 699	75	206
Unemployed	426	146	237	43
Not in labour force	5, 214	314	80	4, 819

This table shows that, on the basis of the restricted sample used (i.e. those persons who were in the sample in both months, yielding an estimated population of 11,619,000 persons), there was a decrease in unemployment from 426,000 to 392,000 between April and May. Of the 426,000 unemployed in April, 146,000 became employed, 43,000 left the labour force, and 237,000 remained unemployed. These 237,000 were joined by 75,000 persons formerly employed and 80,000 persons formerly out of the labour force to make up the 392,000 unemployed in May.

Changing number of persons who participate in the labour force – The number of unemployed, as indicated in the discussion on gross flows above, is influenced not only by persons shifting between employment and unemployment, but also by fluctuations in the actual size of the population who participate in the labour market. This fluctuation in the size of the labour force has seasonal, cyclical, and longer-run trend movements associated with it. Among the longer-run trends are the declining participation of persons over the age of 65 as retirement occurs increasingly earlier. The nature of those swings in labour force participation which accompany the movements in the business cycle are the subject of much academic investigation. High unemployment may discourage certain groups of people from entering the labour force and, at the same time, high unemployment may draw other secondary workers into the labour force in an attempt to stabilize family income. Both these effects occur and the empirical studies are directed to finding which predominates at different times. Seasonal changes in labour force participation are well illustrated by the influx of students into the labour market at the end of the school or university term. This search for summer jobs increases the unemployment figures for young persons quite dramatically in the summer months.

Changes Caused by the Survey Methodology

Sampling error – The actual methods and techniques of collecting the data can cause some fluctuation in the unemployment rates. One of the most important of these factors is sampling error. The labour force sample of 30,000 households, which results in over 70,000 interviews each month, is one of the largest monthly samples of households in the world, many times larger, for example, than the samples used for public opinion polls and the like. Nevertheless, the sample is still less than 1% of the households in the country and will therefore produce estimates that will be somewhat different from the results that would be obtained if it were possible to conduct a survey of the entire population using the same concepts, interview techniques, quality control, etc. It is possible to calculate an estimate of this "sampling error". For example, the actual unemployment rate decreased from 7.4% to 6.8% between March and April, 1972. This represented a decline of 50,000 unemployed persons. Calculations of sampling error indicated that the chances were 2 out of 3 that this estimate of change was accurate within 15,000. In other words, the chances are 2 out of 3 that the actual increase was between 35,000 and 65,000. In this case, the sampling error would not likely cause any problems of interpretation. However, there are instances when one must use caution because of the sampling error. For example, between May and June, 1971, unemployment increased very slightly from 543,000 to 551,000. This was an increase of 8,000 but the sampling error indicated that chances were 2 out of 3 that this was accurate only within 17,000. In other words, there was a reasonable possibility that the real figure actually declined. Particular caution must be used with smaller figures. The per cent sampling error increases for smaller estimates and more detailed breakdowns and caution must be exercised in interpreting the smaller changes in the figures for, say, the smaller provinces or different age-sex groups. The monthly publication *The Labour Force* contains indications of the sampling error for most estimates.

Non-sampling errors – Errors which are not related to sampling may occur at almost every phase of a survey operation. Interviewers may misunderstand instructions; respondents may make errors in answering questions; the answers may be incorrectly entered on the questionnaires; and errors may be introduced in the processing and tabulations of the data. All of these errors are called non-sampling errors. Most non-sampling errors will usually balance out over a large number of observations but any systematically recurring errors will contribute to biases and any such biases would not be reflected in the calculations of sampling error mentioned above. The Labour Force Survey has extensive quality control programs on all phases of its operations including programs of interviewer training and supervision, re-interviews, quality control of coding, etc. With these careful checks, it is not likely that non-sampling errors will have an important effect on month-to-month changes in the unemployment rate.

Changes due to rounding – Another illustration of the care that must be used in interpreting small changes, especially for smaller unemployment estimates, arises from the fact that the estimates are rounded to the nearest thousand and rates are calculated on the basis of these rounded figures. Rounding data is desirable for purposes of simplicity and to avoid giving an exaggerated impression of the accuracy of the data, but it can also cause problems in the case of small estimates. Take, for example, the change in unemployment in Saskatchewan between September and October 1971. The unrounded figures showed a decline in unemployment from 9,977 to 9,510. These were rounded to 10,000 in both cases. The published rate, based on the rounded figures, showed an increase in the rate from 2.8 to 2.9. Based on unrounded data there would have been a decline from 2.8 to 2.7. This is shown in the following table:

Effect of Rounding, Unemployment Rate, Saskatchewan, September-October, 1971

	Unrounded		Rounded	
	September	October	September	October
Labour force	352,642	347,363	353,000	347,000
Unemployed	9,977	9,510	10,000	10,000
Unemployment rate	2.829 or 2.8	2.738 or 2.7	2.833 or 2.8	2.882 or 2.9

Seasonal adjustment problems— Another area where methodology can affect the data is in seasonal adjustment. If the amount of seasonal variation did not change from year-to-year, our seasonal adjustment methods would have relatively little problem in making accurate adjustments to the data to remove the seasonal factor. However, seasonality does change over time. For example, unemployment is somewhat lower in winter now than 10 years ago, partly as a result of the declining proportion of the labour force that is in the outdoor industries. Summer unemployment, on the other hand, is somewhat higher now as a result of the increasing number of students entering the labour force during the summer months. On a current basis, it is not possible to distinguish newly emerging seasonal patterns from other irregularities. One can only obtain a picture of emerging changes in seasonality in retrospect, as the new patterns become established. This makes revisions necessary. These revisions are carried out on an annual basis and each January revised adjusted figures are published for the entire historic series. At the same time, the computer uses past experience to project ahead a new set of seasonal factors for the next year. It is these forecasted factors which are used to calculate the current seasonally-adjusted unemployment figures. The annual revisions are usually small, rarely exceeding one or two tenths of a per cent for the national unemployment rates. However, revisions have been larger than usual in the past few years. This means that changes of one tenth or even two tenths in the seasonally-adjusted unemployment figure between two months must be interpreted with caution. The following table shows the revisions that were made to the data in the last two years. The original 1970 data were adjusted using a slightly different technique than that now used, but this change did not result in any major revisions to the data.

There are then a wide variety of factors than can cause changes in the unemployment rate. Since the rate is used as a barometer of the health of the economy, it is important that these factors be well understood and the data used with the necessary caution.

We will conclude with three general comments about the use of the total unemployment rate as an indicator of the health of the economy. First, the unemployment rate is not the only measure of change in the labour market. Indeed, for many purposes, the employment series is a better indicator than unemployment; certainly it is less irregular and has less sampling error. Second, the unemployment rate is only a summary measure and, for many purposes, it is desirable to consult the wealth of published detail behind the summary. Third, when a decision has been reached to use the total unemployment rate, caution must be used in interpreting month-to-month changes, particularly if these changes are small. Movements in the rate over a period of several months should be examined in order to gain a realistic insight into labour market developments.

Revisions Made to the Seasonally-adjusted Unemployment Rate, 1970 - 72

	1970 data			1971 data	
	As first published	As revised in 1971	As revised in 1972	As first published	As revised in 1972
January	4.5	4.7	4.8	6.2	6.4
February	4.8	5.0	5.1	6.2	6.4
March	5.1	5.2	5.3	6.0	6.3
April	5.6	5.6	5.6	6.7	6.7
May	6.2	6.1	6.1	6.3	6.3
June	6.6	6.3	6.2	6.4	6.3
July	6.7	6.6	6.5	6.3	6.2
August	6.7	6.6	6.4	6.5	6.3
September	6.9	6.8	6.6	7.1	6.9
October	6.6	6.5	6.3	6.7	6.5
November	6.5	6.5	6.4	6.6	6.6
December	6.6	6.6	6.7	6.2	6.3

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer print-outs. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
--	amount too small to be expressed
-	nil or zero.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 3 Table 3.1 – Financial Flows

Data for the fourth quarter 1971 and supplementary tables covering revised fourth quarter 1970 and for the years 1970 and 1971 were published in the May issue of this publication.

The first quarter of 1972 will be available in the September issue.

Section 4 Table 1 – Wages and Salaries, by Province

Revisions for these series will be available in the Fall of 1972.

Section 13, Table 4 – Cheques Cashed in Clearing Centres

The seasonally adjusted series Cheques Cashed, Atlantic Provinces, has been revised from 1945 to date as follows:

The total obtained by summing seasonally adjusted series for the four component provinces has been replaced by direct adjustment of the Atlantic Provinces total. This revision reflects a reevaluation of the quality of adjustment obtained by these two methods. The revised historical data are available on request.

STATISTICS CANADA INQUIRIES DIRECTORY*

How to make Inquiries

If you are aware of the section of Statistics Canada to which a specific inquiry should be addressed, by all means so address it. If not, your best course is to send it to Inquiries Section, Statistics Canada, Ottawa (telephone 992-2959, area code 613).

If you wish to telephone Statistics Canada for information and are using long distance, it is obviously best if you can contact the appropriate section with your first call. The Inquiries Directory contains the telephone numbers most commonly used by the public. Because the names of officers who answer inquiries in the various divisions sometimes change, the names are not included, and the telephone numbers have been listed by the most common headings and subheadings of subjects to be dealt with. If in doubt about whom you should call, please contact the Inquiries Section.

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2. 3)

The preliminary seasonally adjusted index of industrial production for May decreased by 1.0% to 186.5, following a strong increase in April. Mining and manufacturing registered decreases as both durables and non-durables manufacturing output declined. The output of electric power, gas and water utilities increased.

		total industrial production (1961=100)	manufacturing (1961=100)			(1961=100)	
			total	durables	non-durables	mines (incl. milling), quarries & oil wells	electric power, gas & water utilities

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Section 6, Table 16 and Section 10, Table 1)

During May, jewellery stores, fuel dealers and motor vehicle dealers reversed the upward trend experienced in the previous month's seasonally adjusted retail sales, thus contributing to an overall decline of 0.7% in Canadian retail trade between April and May 1972. Seasonally adjusted increases of 6.9% and 6.8%, respectively, in sales by hardware stores and general merchandise stores were insufficient to offset the aggregate slump.

Seasonally adjusted unit sales of new motor vehicles which tended to show little fluctuation from January to April 1972, rose sharply in May. The overall increase over the preceding month was +17.6% for all vehicles, +18.7% for those manufactured in North America, +6.5% for overseas manufactured vehicles and +26.6% for commercial vehicles.

INCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

Preliminary estimates indicate continued growth in the nation's output of goods and services. GNP rose by 2.2 per cent in current dollars and by 1.1 per cent in constant 1961 dollars. A feature of demand was the large increase in inventory investment. The most noteworthy development on the income side was an accelerated gain in labour income.

Current account transactions continued to deteriorate producing a deficit of $367 million in the first quarter of 1972. This decline was due largely to the upsurge in merchandise imports.

		gross national product[1]		personal expenditure on goods and services	business gross fixed capital formation	labour income	corporation profits before taxes[1],[2]	balance of international payments

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentar evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Censu of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number i non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancée and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than governmen business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect o price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in e implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quar- ly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally ward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and other short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: The Labour Force (71-001), Statistics Canada.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001), Statistics Canada.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001), Statistics Canada.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such a those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are n shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes als publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping, noncommercial services, plywood households, public administration and defence. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities.** Information on inter-city retail price differentials is contained in technical note No6 published in the June 1969 issue of the Canadian statistical review. [3] The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home ownership costs. [4] Indexes for Quebec City and Thunder Bay are on the (1969=100) base. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-ter contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the peri at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Tot manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001) Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

annual average and month	total shipments	non-durable	durable	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), Statistics Canada.**

---

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipment to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural stee fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments 42-002), New motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes cru oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gro new production by field less field flared and waste. [4] By gas utilities, **does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-00 Gas Utilities (55-002), D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are availabl on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, th number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Permi (64-001), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the tab due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations norm follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and consider change may develop before the completion of the operation. [2] From January 1972 includes Yukon and the North West Territories. **Source: Building Perm (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: New Residential Construction (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such a changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison o them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1970 and 1971 price indexes are subject t revision. [3] 1971 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group include Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custo Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals due to rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mo gages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owi to doctors, dentists, lawyers, and other personal service credit as they are not available. [2] Owing to the considerable extent of common ownership and overlap function within these two groups of companies their holdings are treated jointly beginning in January 1970. [3] Conditional sales agreements held by sales finan companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with Janua 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts sho exclude unearned finance charges: for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. [4] Personal cash loans of up to $1,5 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usual repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure 16.5 per cent. [6] The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted for [7] Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing co panies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assum tion that the two series are subject to the same seasonal effects. [8] Bills due for residential/domestic use of telephones, gas and electric power. Sourc **Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculate separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most importc are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade Canada, Exports (65-004), Statistics Canada.**

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machir have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imp (65-007), Statistics Canada.**

---

[1] Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest rlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair d Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is cluded prior to 1970. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) atistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base etals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks cluded in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries xcept electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices d Price Indexes (62-002), Statistics Canada.**

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Onto Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commer Failures (61-002) Quarterly, Statistics Canada.**

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
--	amount too small to be expressed
-	nil or zero.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 3, Tables 2.1 to 2.3 – Domestic Product by Industry

Users should note that data for the Indexes of Real Domestic Product and the Index of Industrial Production contained in Section 3, Tables 2.1 to 2.3 have been revised for the period January 1968 to May 1972. The revisions result from the incorporation of more recent annual data (causing revisions in level), and from the incorporation of new monthly information as well as updated seasonal adjustment factors. Revised data are available with the June issue of 61-005 Indexes of *Real Domestic Product by Industry* or CANSIM matrices 15, 16 and 1421.

Section 3, Table 3. – Financial Flows Matrix

Data for the first quarter 1972 and supplementary revised tables covering first quarter 1971 and annual 1970 and 1971 incorporate the latest revisions of the National Income and Expenditure Accounts.

Section 10, Table 2 – Department Store Sales and Stocks

Revisions for these series have been made from January 1971 to date.

Section 11, Tables 1 and 2 – Merchandise Exports, Major Countries and Areas

Revisions to the seasonally adjusted series in this table, included with the August issue, extend back to January 1969.

Section 13, Table 4 – Cheques Cashed in Clearing Centres

The seasonally adjusted series Cheques Cashed, Atlantic Provinces, has been revised from 1945 to date as follows:

The total obtained by summing seasonally adjusted series for the four component provinces has been replaced by direct adjustment of the Atlantic Provinces total. This revision reflects a reevaluation of the quality of adjustment obtained by these two methods. The revised historical data are available on request.

With the advent of centralized data processing, Bank Clearing Houses as they were known have been closed down.

The current debit to individual accounts figures continue to reflect data from what had been the previous centres but it will be incorrect to assume that this comparison will remain valid through time.

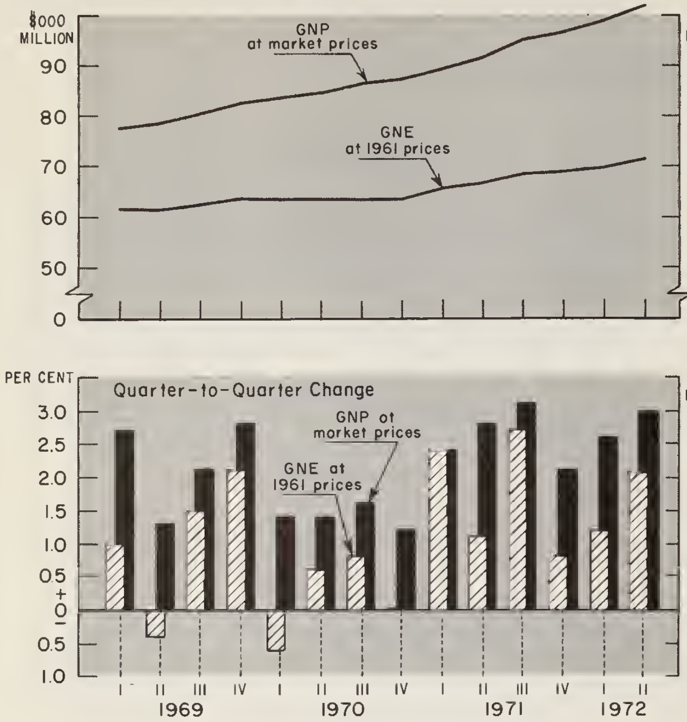
An examination is currently underway in an attempt to establish boundaries that could be more precisely defined.

Recent Publications of Interest

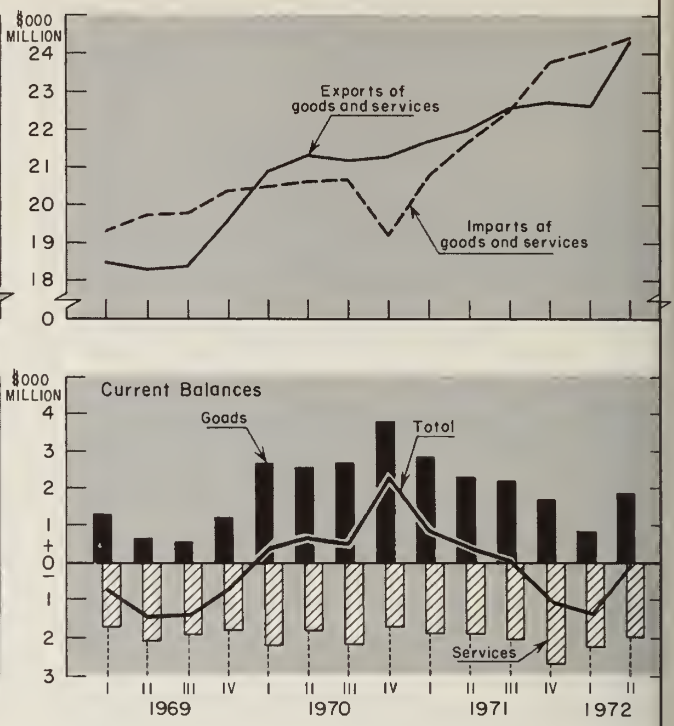
Non-institutional Special Care Facilities, 1971-1972 (Catalogue 83-519). This publication indexes and describes some 3,000 "Outreach" health and welfare facilities throughout Canada. They offer non-institutional special care, and include such facilities as drug centres, street clinics, home visiting groups, suicide prevention and legal counselling services.

Prices and Price Indexes (Catalogue 62-002). A Special study of Inter-City Indexes of Fuel and Electricity Costs as of May 1971 and February 1972 for eleven Canadian centres appears in the first pages of the June 1972 issue.

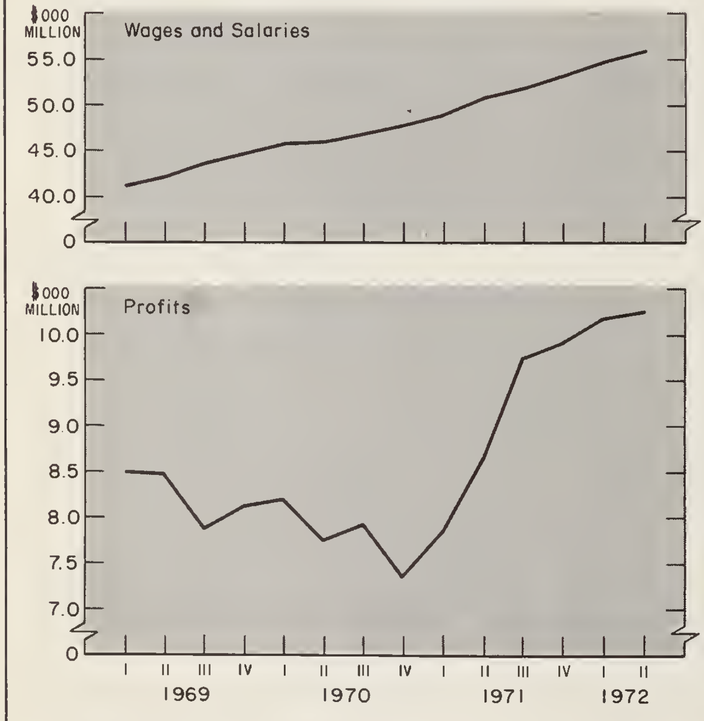
GNP at market prices rose 3.0 per cent to reach $102.1 billion. Expressed in 1961 prices the rise was 2.1 per cent



With exports rising by 7.1 per cent and imports by only 1.6 per cent, the deficit on the balance of transactions in goods and services was reduced by $1,276 million. Most of the gain originated in the goods balance.

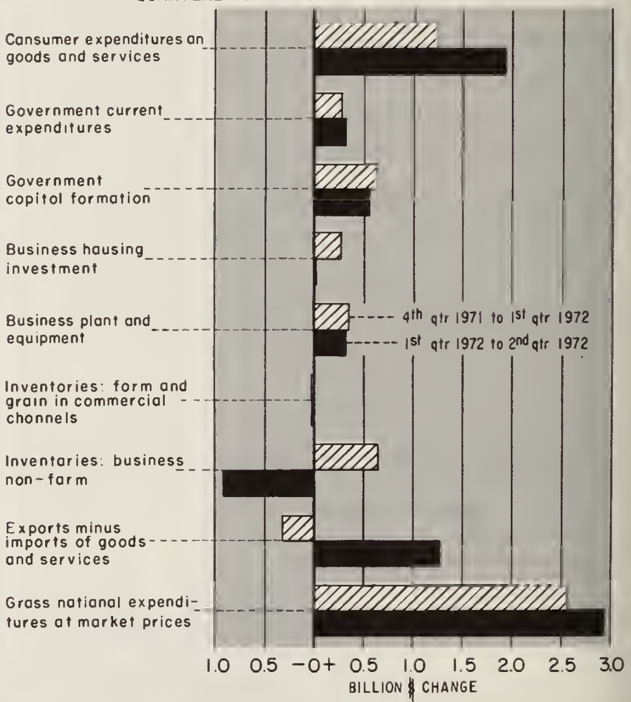


On the income side, labour income registered a strong 2.4 per cent increase. Corporation profits continued to rise, but at a much diminished pace.



The bulk of the increase in GNE originated in consumer demand and in net exports. These gains were somewhat offset by a steeply diminished rate of inventory investment.

QUARTERLY CHANGES IN GNE AND COMPONENTS



ALL DATA SEASONALLY ADJUSTED AT ANNUAL RATES.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS
SECOND QUARTER 1972

Preliminary estimates of the National Income and Expenditure Accounts indicate a quickened tempo of economic activity in the second quarter, characterized by strong final domestic and foreign demand and by a moderation in the overall rate of price increase.

Gross National Product at market prices, seasonally adjusted at annual rates, rose by $2.9 billion to a level of $102 billion, a quarterly increase of 3.0%. Reflecting some easing in the rate of increase of most price measures, as well as sizable weight shifts in demand, the implicit price index for GNP decelerated, rising by 0.8% compared with 1.4% in the revised first quarter estimate. Deducting that part of the market value of deduction attributable to price change yields a 2.1% volume gain in GNP. Real growth in the preceding period was 1.2%.

The stimulus to production in the second quarter was provided by final domestic demand, mostly personal expenditure on consumer goods and services, and by net foreign demand, as export gains exceeded the growth of imports by a wide margin. Investment in fixed capital also contributed to growth, although to a much lesser extent, as large gains in business spending on machinery and equipment and in government capital outlays more than offset the lackluster performance in construction, which was affected by strikes. Perhaps not surprisingly, in view of the pervasive strength of demand in the quarter, the rate of business investment in inventories declined sharply. By contrast, in the previous two quarters the rebuilding of business inventories had been one of the major sources of strength.

Since the closing quarter of 1971, real GNP has been rising at a quarterly rate of 1.6%, about the same rate as during 1971. In current dollars, continuing strong gains in consumer expenditure, which rose at a quarterly rate of 2.7% in the six-month period, and resumed growth in business capital outlays, mostly in machinery and equipment and in non-farm inventories, were major forces behind the expansion. The external sector also contributed to the strength of demand in the first half of the year, as exports rose much faster than imports. The highlight on the income side was an acceleration in the rate of increase of labour income. It rose at a quarterly rate of 2.8% compared with a rate of 2.1% in the second half of 1971. Corporation profits, on the other hand, rose at a much diminished rate.

In the second quarter, consumer outlays on goods and services rose by $1.9 billion, or 3.3%, to a level of $59.3 billion. This increase was one of the largest in recent years. The acceleration was entirely due to an upsurge of 4.2% in spending on goods, twice the first quarter rate of increase. New automobiles in particular, rebounded strongly after a decline in the first quarter. The rise in spending on services of 2.1%, was slightly lower than in the first quarter. Probably contributing to the strength of consumer demand was a billion-dollar increase in government transfer payments to persons. These were mostly in the form of old-age pensions, due to a retroactive increase in the rate; and of unemployment insurance benefits, for which higher rates and extended coverage were introduced at the beginning of the year.

The increase of 5.4% in expenditure on durable goods (contrasting with virtually no change in the first quarter) was entirely accounted for by the new and used automobile components. Spending on new automobiles was up by almost 18% after an 8.6% decline in the first quarter. The only other major item in this category to show an increase in spending was furniture, up by 2.0%.

The rate of consumer spending on other types of goods was also very brisk. In particular, sales of semi-durable goods rose by 5.7%—the largest increase in over four years. The previous quarterly increase had been 1.0%. The greatest advances were in expenditure on men's and boys' clothing, on books and magazines, each of which rose by about 9%. Expenditure on footwear rose by 6.2%, and outlays on women's and children's clothing rose 3.3%. Spending on non-durable goods, also rose strongly, by 2.9%, although the rate of advance was somewhat lower than the very strong 3.6% gain registered in the previous quarter. Among items showing the largest percentage increases, were expenditures on pharmaceutical products, household supplies (such as cleaning compounds) and tobacco. Partly because food prices moderated their rate of advance in the second quarter, expenditures on food rose by a lesser percentage than in the first quarter, 2.6% versus 3.1%.

Expenditure on services rose by 2.1%. The most notable movement was shown by expenditures in hotels, restaurants and cafes, which continued to rise strongly. They were up 4% after a rise of 6% in the first quarter. Rents, the largest component in services, which accounts for approximately a quarter of the total of such expenditure, rose by 2%, approximately the same rate as in the first quarter.

Preliminary estimates of government current expenditure on goods and services indicate a moderate rise of 1.5%—about the same as in the first quarter. Most of the increase took place at the federal level, where expenditure rebounded upward by 6.2%, after an unusually large decline of 5% in the first quarter centered in defence spending. The second quarter gain was in goods and services other than wages and salaries, as the latter showed little change at the federal and local government level and declined at the provincial level, which were affected by strikes, especially in Quebec. Government expenditure on fixed capital rose strongly, by 5.0%, after a 0.1% decline in the first quarter. Most of this increased outlay was in highway construction.

Total expenditures of all governments combined rose by a sharp 4.3%, the major part of the increase being in the form of transfer payments (as distinct from current and capital outlays on goods and services). With total revenues showing little change, the deficit of the government sector (on a national accounts basis) widened from a rate of $216 million in the first quarter to $1,696 million in the second quarter. Both the federal and provincial governments registered the largest deficits in several years.

Spending on housing had been rising sharply for over a year. In the second quarter, investment at $5,036 million was about the same as in the first quarter. This levelling was mostly due to prolonged labour stoppages in British Columbia. There are indications that the strikes affected mostly the construction of apartment buildings. Value of work put in place in single dwellings continued to rise strongly. The underlying situation in housing remained strong. The continuing high level of new starts at 256,800 units was only slightly off the first quarter record level of 262,300 units.

Business investment on plant and equipment, as indicated by changes in employment, labour and material prices, rose by 2.5%—roughly the same rate as in the first quarter. The second quarter strength in such outlays flowed entirely from a notable acceleration in the rate of spending on machinery and equipment (up 5.7% compared with 3.3% in the first quarter), particularly on commercial vehicles, passenger cars for business use and farm implements. Outlays on non-residential construction, also seriously affected by the strikes in British Columbia, declined by 0.9%, following a rise now estimated at 2.2%.

As has already been mentioned, the falling rate of investment in business non-farm inventories dampened the growth of aggregate demand. The modest accumulation of $164 million followed an unusually large accumulation of $1,084 million in the first quarter. In the second quarter the growth of final domestic demand and of foreign demand combined was almost as large as that of production and imports, preventing a further sizable inventory build-up.

The decline in the rate of inventory investment, which occurred at all three major industry levels, was most notable in retail trade, where a $628 million accumulation in the first quarter gave way to a $20 million liquidation in the second quarter—a turnaround of $648 million. The bulk of this decline was centered in the stocks of motor vehicle dealers, accompanying rising sales of such products in the period. In wholesale trade, stock accumulation declined from $740 million in the first quarter to $252 million in the second quarter. The softening was concentrated in durable goods. In manufacturing decumulation continued. The value of physical change declined by $72 million, from a liquidation of $60 million in the first quarter to one of $132 million in the second quarter. Pronounced declines occurred in transportation equipment and in food products. The stock-to-shipments ratio declined in the quarter to its lowest level in several years.

In sharp contrast with the pattern of the four previous quarters, the external sector gave a considerable boost to the economy in the second quarter. The deficit in transactions on goods and services with non-residents narrowed by $1,276 million, contributing about 40% of the GNP increase. Most of this gain was due to a jump of $1,044 million in the merchandise surplus. Some net gain was also derived from the non-merchandise balance, for which the deficit fell by $232 million, largely on account of freight and shipping transactions.

Underlying the striking improvement in the merchandise surplus, was a 8.5% forward thrust in merchandise exports—the largest quarterly gain since the first quarter of 1968. (Merchandise exports had increased marginally in the first quarter.) Partial commodity details indicate particularly large wheat exports. Other important gains occurred in automotive products, crude petroleum, lumber and aircraft engines and parts. Merchandise imports rose at a much slower pace than exports—they were up 2.9%, after an increase of 6.2% in the first quarter. Notable gains were shown by some machinery and equipment components, particularly mining, construction and drilling machinery, trucks and truck tractors and communications and related equipment. The gain in the merchandise balance resulted from trade with the United Kingdom and other overseas countries. Even though exports to the United States continued to rise strongly, imports rose even more, causing a decline in the balance with that country.

Whereas the expenditure side of the accounts gives an unambiguous picture of buoyancy in the second quarter, movements on the income side are rather mixed. In particular, the more volatile components, such as accrued farm income and interest and miscellaneous investment income made an uncommonly large contribution to the overall advance. By contrast, corporation profits and capital consumption allowances rose modestly, and the rise in labour income though sizable, was appreciably smaller than in the first quarter. A reverse pattern of income and expenditure growth in the first quarter suggests timing problems in the recording of transactions. Thus, if the two first quarters of the year are taken together, there emerges a far more consistent pattern of income and expenditure

(Continued on page 118)

ABOUR FORCE (More detail in Section 4, Table 3)

Both employment and unemployment increased between June and July. The unemployment rate was 6.3 per cent.

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2. 3)

The seasonally adjusted Index of Industrial Production for June increased to 194. 2 (1961-100). 0. 7% above the revised May level. Output of manufacturing and electric power and gas utilities increased while mining output declined.

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Section 6, Table 16 and Section 10, Table 1)

Canadian retail trade, seasonally adjusted, increased by 0.4% between May and June 1972, although only five of the 18 trade groups surveyed registered gains. Two of the five were grocery and combination stores and motor vehicle dealers, which account for approximately 20% of total retail sales.

Seasonally adjusted sales of new motor vehicles in June 1972 were down 4.4% following exceptionally high sales in May, but were still 18.9% greater than in June 1971.

INCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

Preliminary estimates indicate a quickened tempo of economic activity in the second quarter, stimulated by strong final domestic demand, particularly consumer expenditure, and by net exports. GNP rose by 3.0 per cent in current dollars and by 2.1 per cent in constant 1961 dollars.

	gross national product[1]		personal expenditure on goods and services	business gross fixed capital formation	labour income	corporation profits before taxes[1],[2]	balance of international payments

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentai evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Censu of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number i non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancée and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than governmen business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1 **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated s associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment f insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally pward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and other short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: The Labour Force (71-001), Statistics Canada.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities.** Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. [3] The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home ownership costs. [4] Indexes for Quebec City and Thunder Bay are on the (1969=100) base. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month						ratio of inventories owned to shipments
						all inventory held				
				owned[3]	held but not owned	total	raw materials	goods in process	finished products

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Total inventories owned by manufacturers including warehouse stocks.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 4: estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1960 standard industrial classification (million dollars)

annual average and month		shipments							unfilled orders at end of month						
		consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), Statistics Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.
[5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry.

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

[1] Includes record players. [2] Includes producers' shipments for export. [3] Includes portables. [4] Radio phonograph combinations. [5] Includes monaural and stereo with and without amplifiers. [6] Excludes producers' shipments for export. [7] Included with "total television receivers". [8] Customs clearance; radio sets include all types; television sets include colour and black and white. **Sources: Radio and Television Receiving Sets (43-004); Trade of Canada, Imports (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities, **does not include imports.** **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.**

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Permits (64-001), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. [2] From January 1972 includes Yukon and the North West Territories. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: New Residential Construction (64-002), Statistics Canada.**

Note· Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such a changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison o them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1970 and 1971 price indexes are subject t revision. [3] 1971 price indexes are subject to revision. [4] Form share only of motor vehicles. [5] In addition to the components listed, the major group include Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Milk equivalents of cottage cheese are not included in the monthly figures but are included in the monthly averages. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Includes butter and cheese imported and in (railway) transit through June 30, 1968. [5] Exclusive of Newfoundland; includes hatching eggs. **Sources: Dairy Factory Production (32-002), Dairy Review (23-001), Stocks of Dairy and Poultry Products (32-009), Production of Eggs (23-003), Statistics Canada.**

---

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006), Quarterly Reports, Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals due to rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges: for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. [4] Personal cash loans of up to $1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. [6] The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. [7] Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. [8] Bills due for residential/domestic use of telephones, gas and electric power. **Sources Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculate separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most importa are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade Canada, Exports (65-004), Statistics Canada.**

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

year and month		total railway revenue freight loadings (carload and non-carload) (000 tons)	total revenue cars loaded (carload only)	farm products and food						mine products				forest products		
				wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash[2]	coal, sand, cement and other mine products	lumber and plywood	pulpwood	other forest products

[1] Based on weekly (monthly in 1970) carloadings reported by major lines carrying over 99% of railway traffic in Canada. [2] Included in other manufactures and niscellaneous prior to 1970. [3] Includes small tonnage of express traffic not available before 1970. [4] Receipts from U.S. connections not separated from receipts rom other Canadian roads before 1970. [5] Data prior to 1970 not comparable with current data. [6] Thousand tons. **Source: Monthly Report, Railway Car Loadings 52-001), (Weekly, Prior to 1970), Railway Freight Traffic (52-002), Statistics Canada.**

[1] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [2] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.**

---

[1] Includes Class 1 carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regul and chartered services are included. [2] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for mot bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight (53-005) quarterly, Passenger Bus Statistics (53-002 monthly, and Urban Transit (53-003) monthly, Statistics Canada.**

[1] Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Total of foreign funds, short term foreign investments, and other foreign currency assets less foreign currency liabilities. [7] Excluding Canadian day-to-day loans. [8] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [9] Loans to grain dealers and exporters. [10] Loans to finance purchase of Canada Savings Bonds at time of issue. [11] Including loans to instalment finance companies. **Source: Bank of Canada Review.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. [1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does n include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontari Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements ma under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commerci Failures (61-002) Quarterly, Statistics Canada.**

(Continued from page 6)

growth. It should perhaps be emphasized at this point that the estimates are preliminary, being based in many instances on very partial information, and are sometimes subject to large revisions when more complete data become available.

Labour income grew by 2.4% compared with 3.1% in the revised first quarter. Part of the large increase in the first quarter was due to large retroactive payments in public administration, and to a sudden increase in supplementary labour income due to changes in the Unemployment Insurance Act providing for larger employer and employee contributions; on the other hand, industrial disputes slowed the growth of labour income in the second quarter.

Wages and salaries grew at a much faster pace in the goods-producing industries, up 3.1%, than in the service-producing industries, up 2.0%—a reversal of the general trend of recent years. Most of the gain in goods-producing industries originated in manufacturing which showed a 4.0% advance compared with 2.2% in the first quarter, but wages in primary industries also rose strongly, 2.8%. Wages and salaries in construction, on the other hand, which was affected by labour disputes in British Columbia advanced by 0.5%. In the service-producing industries, most of the deceleration was attributable to industrial disputes in the province of Quebec in April, particularly in education, health services and public administration. Among other service-producing industries, trade and commercial services rose very strongly, by 4.4% and 4.9% respectively.

Very preliminary estimates of corporation profits before taxes show a sixth consecutive quarterly increase, but the gain of $64 million, or 0.6%, was considerably smaller than previous ones. The new level of $10,260 million is almost 40% above the trough in the fourth quarter of 1970.

Among other income components, the most pronounced movements were shown by interest and miscellaneous investment income, up 8.7% largely on account of increased government investment income, and by income of unincorporated businesses, especially accrued net income of farm operators. The main factors behind the unusually large gain of $608 million in farm income were higher subsidy payments due to the introduction of a two-price policy for wheat and rises in the prices of livestock. Much of the 4.7% rise in the net income of non-farm unincorporated business originated in trade; large gains were also recorded in construction and in service industries.

Mostly because of the large increase in transfer payments, personal income rose 4.3%—the largest percentage gain in many years. Due to higher than usual refunds of income taxes, personal disposable income grew even faster, by 5.5%. As a consequence of these unusual developments, and despite rising outlays on consumer goods and services, there appears to have been a jump in the saving ratio (personal saving as a proportion of personal disposable income), from 8.5% to 10.3%.

Price Movements

The rise in the implicit price index of gross national expenditure, slowed to 0.8%, compared with the 1.4% increase witnessed in the first quarter. Lower price increases for personal expenditure, gross fixed capital formation, and current government spending were mainly responsible for this reduction in the rate of recent price rises. Strike conditions, which affected wage spending by governments, can be related to the 0.6% decrease in the implicit price of government current expenditure. (The slowing in the rate of increase of consumer prices was not continued into the first month of the third quarter. The July increase in the consumer price index, largely due to food prices amounted to 1.2%.)

Personal expenditure prices, up 0.7%, registered about half the first quarter rise. There was a relatively even deceleration in price increases in all individual components. Changing consumer purchases had an effect on implicit price indexes for durable and semi-durable goods. Weight shifts in the composition of spending, in particular due to the large relative increase in outlays on automobiles and on clothing, had the effect of slowing the rates of increase of durable and of semi-durable goods to 0.3% and 0.5% respectively. Prices for non-durable goods, and services which were higher by 1.1% and 0.8% respectively were mainly attributable to price moderation. A slower increase in food prices from 3.7% in the first quarter to 1.0% in the second was largely responsible for the dampening of the price rise in non-durable goods. The moderation in the prices for services was fairly evenly spread.

Gross fixed capital formation prices rose 0.8%, compared with 1.6% last quarter. The largest price rises continued to be in construction as machinery and equipment prices reflected a low 0.4% increase. The rate of building materials price increases slowed slightly in all construction sectors, but the movement of labour costs was mixed. Labour costs were higher in residential construction, but lower in non-residential building and engineering. This accounts for the fact that the residential components rose at 2.2%, a much stronger rate than the 1.1% in non-residential construction.

While second quarter prices for both exports and imports were lower, the net effect was to add strongly to the overall increase of GNE implicit price index. In the first quarter, the export and import price indexes both rose at an equivalent rate, whereas in the second quarter the 1.0% export price increase was accompanied by a 0.4% drop in the price of imports. In the second quarter, movements in the external sector were affected by a 1.5% increase in the exchange value of the Canadian dollar relative to the United States dollar.

TABLE 1. National Income and Gross National Product, by Quarters, 1971 and 1972

Seasonally adjusted at annual rates

	1971					1972	
	I	II	III	IV	Year	I	II
	$'000,000						
Wages, salaries, and supplementary labour income	48,932	50,980	51,996	53,132	51,260	54,772	56,092
Military pay and allowances	908	900	888	936	908	956	960
Corporation profits before taxes[1]	7,860	8,660	9,752	9,928	9,050	10,196	10,260
Deduct: Dividends paid to non-residents[2]	- 848	- 852	- 848	- 1,380	- 982	- 876	- 868
Interest, and miscellaneous investment income[3]	3,788	3,756	3,776	3,920	3,810	3,976	4,320
Accrued net income of farm operators from farm production[4]	1,408	1,392	1,612	1,784	1,549	1,356	1,964
Net income of non-farm unincorporated business including rent[5]	5,412	5,564	5,712	5,808	5,624	5,892	6,164
Inventory valuation adjustment[6]	- 428	- 756	- 808	- 552	- 636	- 816	- 704
Net national income at factor cost	67,032	69,644	72,080	73,576	70,583	75,456	78,188
Indirect taxes less subsidies	12,028	12,172	12,492	12,640	12,333	13,364	13,304
Capital consumption allowances and miscellaneous valuation adjustments	10,276	10,456	10,728	11,004	10,616	11,112	11,224
Residual error of estimate	- 28	- 444	- 656	- 624	- 438	- 780	- 624
Gross National Product at market prices	89,308	91,828	94,644	96,596	93,094	99,152	102,092
(Gross National Product at market prices excluding accrued net income of farm operators)	(87,900)	(90,436)	(93,032)	(94,812)	(91,545)	(97,796)	(100,128)

[1] Excludes profits of government business enterprises.

[2] Includes the withholding tax applicable to this item.

[3] Includes profits (net of losses) of government business enterprises and other government investment income.

[4] Includes an arbitrary smoothing of crop production, and standard seasonal adjustment for withdrawals of grain from farm stocks and for the change in farm-held livestock and other inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.

[5] Includes net income of independent professional practitioners.

[6] See footnote 4, of Table 2.

TABLE 2. Gross National Expenditure, by Quarters, 1971 and 1972

Seasonally adjusted at annual rates

	1971					1972	
	I	II	III	IV	Year	I	II
	$'000,000						
Personal expenditure on consumer goods and services	51,440	53,512	54,748	56,152	53,963	57,372	59,280
Government current expenditure on goods and services[1]	17,328	18,020	18,720	19,376	18,361	19,636	19,932
Gross fixed capital formation	18,912	19,972	20,564	21,064	20,128	21,672	22,192
Government[2]	3,424	3,660	3,808	3,872	3,691	3,868	4,060
Residential construction	24	24	24	28	25	24	32
Non-residential construction	3,036	3,252	3,372	3,420	3,270	3,424	3,564
Machinery and equipment	364	384	412	424	396	420	464
Business[3]	15,488	16,312	16,756	17,192	16,437	17,804	18,132
Residential construction	4,020	4,344	4,620	4,764	4,437	5,028	5,036
Non-residential construction	5,696	5,932	6,048	6,048	5,931	6,184	6,128
Machinery and equipment	5,772	6,036	6,088	6,380	6,069	6,592	6,968
Value of physical change in inventories	712	- 484	- 112	432	137	1,060	152
Government	- 44	- 24	- 96	4	- 40	16	44
Business:							
Non-farm[4]	432	- 512	- 12	440	87	1,084	164
Farm and grain in commercial channels[5]	324	52	- 4	- 12	90	- 40	- 56
Exports of goods and services	21,652	21,988	22,552	22,708	22,225	22,664	24,320
Deduct: Imports of goods and services	- 20,764	- 21,628	- 22,484	- 23,760	- 22,159	- 24,032	- 24,412
Residual error of estimate	28	448	656	624	439	780	628
Gross National Expenditure at market prices	89,308	91,828	94,644	96,596	93,094	99,152	102,092
Detail of farm inventories and GICC:							
Value of grain crop production	1,588	1,588	1,588	1,588	1,588	1,316	1,316
Depletions of farm stocks of grain	- 1,328	- 1,404	- 1,500	- 1,548	- 1,445	- 1,324	- 1,716
Change in other farm-held inventories	116	64	84	112	94	92	180
Grain in commercial channels	- 52	- 196	- 176	- 164	- 147	- 124	164

[1] Includes defence expenditures. Details are shown in line 45, Table 16 of the forthcoming publication "National Income and Expenditure Accounts, Second Quarter 1972" (Catalogue 13-001).

[2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure.

[3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings.

[4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The differences between this value of physical change and the change in book value is called the inventory valuation adjustment. (See line 8, Table 1.)

[5] In the seasonally adjusted series, the value of grain crop production in each quarter is taken as one fourth of the estimated value of crop production for the year as a whole (see footnote 4, Table 1). All other items in the farm inventories series are seasonally adjusted by standard techniques.

TABLE 3. Gross National Expenditure in Constant (1961) Dollars, by Quarters, 1971 and 1972[1]

Seasonally adjusted at annual rates

	1971					1972	
	I	II	III	IV	Year	I	II
				$'000,000			
Personal expenditure on consumer goods and services	40,196	41,360	42,008	42,880	41,611	43,208	44,348
Government current expenditure on goods and services	10,400	10,528	10,980	11,128	10,759	11,012	11,244
Gross fixed capital formation	13,768	14,536	14,536	14,812	14,350	15,028	15,264
Government	2,492	2,628	2,716	2,728	2,641	2,708	2,820
Residential construction	16	16	16	20	17	16	20
Non-residential construction	2,160	2,280	2,348	2,348	2,284	2,340	2,412
Machinery and equipment	316	332	352	360	340	352	388
Business	11,276	11,656	11,820	12,084	11,709	12,320	12,444
Residential construction	2,820	3,000	3,124	3,180	3,031	3,296	3,232
Non-residential construction	3,952	4,032	4,064	4,024	4,018	4,028	3,948
Machinery and equipment	4,504	4,624	4,632	4,880	4,660	4,996	5,264
Value of physical change in inventories	584	- 368	20	248	121	820	28
Government	- 36	- 20	- 92	4	- 36	28	28
Business:							
Non-farm	368	- 400	156	320	111	1,004	188
Farm and grain in commercial	252	52	- 44	- 76	46	- 212	- 188
Exports of goods and services	17,852	18,016	18,312	18,508	18,172	18,240	19,380
Deduct: Imports of goods and services	- 16,976	- 17,544	- 17,940	- 19,096	- 17,889	- 19,084	- 19,468
Residual error of estimate	28	332	480	460	325	548	440
Gross National Expenditure in constant (1961) dollars	**65,852**	**66,608**	**68,396**	**68,940**	**67,449**	**69,772**	**71,236**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are available in print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 10th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * * * *

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
--	amount too small to be expressed
-	nil or zero.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 4, Table 1—Wages and Salaries by Province

Following the publication of December 1971 data, annual estimates of wages and salaries were revised from 1947 to date. The revision of the monthly estimates has been completed by industry but not by province. Thus, Table 1 of Section 4 contains unrevised data whereas Table 2 contains revised data.

Section 13, Table 2—Canadian Chartered Banks

Effective January 1969, the chartered banks have been required to maintain a minimum cash reserve ratio on a half-monthly rather than a monthly basis. The averaging periods are now (1) the business days up to and including the fifteenth of the month, and (2) all the other business days of the month. Beginning with this issue these requirements will be reflected in the series, total cash reserves and average cash reserve ratio (%).

Publications of Interest

Personal Income, Geographical Distribution. The geographical distribution of personal income and its main components (e.g., personal disposable income, wages, salaries and supplementary labour income, net income received by farm operators, net income of non-farm unincorporated business including rent, interest, dividends and miscellaneous investment income, government transfer payments to persons) is available on request from Statistics Canada—National Income and Expenditure Division—(tel. 613-992-8741). The statistical tables cover the years 1926 to 1971 inclusive and constitute a partial release of the most recent historical revision of the National Income and Expenditure Accounts.

Labour Force Survey. Starting in September 1971, a new series of special articles and tables on different aspects of the labour force has appeared in the monthly publication, *The Labour Force* Catalogue 71-001 monthly. Copies are available free on request.

September 1971—Student Labour Force in the Summer.
October 1971—The Unemployed by Industry and Occupation.
November 1971—The Unemployed, Family Data.
December 1971—Educational Attainment, May 1971.

July 1972—Multiple Jobholding, June 1972.
August 1972—The Unemployed, Family Data.

CANSIM IDENTIFIERS

With this issue identification numbers are introduced for monthly and quarterly series in CANSIM. Numbers should be prefixed with D, e.g., D 1750, unless otherwise specified.

TERMS OF CREDIT EXTENDED ON 1970 EXPORT SALES BY CANADIAN CORPORATIONS

Stella Gianetto*

Introduction

The results of a recent survey of Canadian exporting corporations on the original terms of credit extended to foreign buyers of 1970 exports indicate that 47.4% of the sales were transacted on credit terms of not more than 30 days. An even 25% of the exports were sold on credit for 31 days up to 180 days and somewhat less (24.1%) on payment before or against delivery. Only 0.8% were sold on credit for 181 days to one year, 1.8% on credit for over one year up to three years, 0.3% for over three years up to five years, and 0.6% for over five years.[1]

An overall pattern of credit for ten major industry groups covering 88% of total exports and re-exports in 1970, which constitutes the full extent of the survey coverage, is set out in Table 1. It will be seen that three industries sold more than 90% of their exports on payment before or against delivery or on credit up to 30 days, namely, transportation equipment, petroleum and natural gas, and food, beverages and tobacco. The first two industries are involved in a high degree of interrelated company billings.

Looking at the proportion of exports sold for cash or on credit up to 180 days, four additional industries transacted 98% or more of export sales in this range: mining and primary metals, chemicals and chemical products, pulp, paper and lumber and other manufacturing.

Only three industries had 10% or more of their sales in credit categories beyond 180 days. These are: agriculture, with respect to government-assisted grain contracts, machinery and metal fabricating and electrical products with respect to capital goods.

Apart from these general observations on the trend of credit extension, the commentary will be focussed on an analysis of the actual returns received from 970 corporations out of 1,240 canvassed. Reported export sales amounted to $12.4 billion.

The reported export sales by credit categories, company affiliation and trading area are shown in Table 2. It is felt that inflation of totals to provide for non-response and undercoverage of company affiliation and trading area data would not yield reliable statistics. There is evidence that some degree of estimation was made by the respondents in providing these details in the survey questionnaire. It will be noted that the general pattern of the returns is different from that depicted in Table 1 by reason of a higher rate of non-response in the smaller industries.

Scope of the Survey

Except for the exports made under financial agreements by the Export Development Corporation, referred to above, the survey attempts to measure only the terms of trade extended by the exporters themselves. It does not include other long-term loans to facilitate export sales offered by international financial agencies such as the World Bank, or domestically by the Canadian International Development Agency, or funds provided by the financial intermediaries either to buyers or sellers of Canadian goods. To this extent it is the terms of credit as they affect the Canadian exporter, and not Canada as a whole, which are reflected in the figures.

The survey was conducted at the request of the Export Development Corporation, a federal government Crown Corporation, whose functions are fourfold. Firstly, it insures Canadian exporters against the non-payment of goods or services for causes beyond the control of seller and buyer. Secondly, it offers long-term financing on sales of capital goods valued at more than $1 million. Thirdly, it guarantees bank loans to foreign buyers on medium-term credit for the purchase of goods with more than 80% Canadian content, and fourthly, it provides insurance support to cover investments made abroad by Canadians.

The purpose of the survey was to derive a national picture of the terms of export trade, to evaluate the importance of credit for specific industries and categories of goods. The statistics will be useful for exporters to compare the amount and length of their export credits with the trend for their own and related industries. They will also be helpful to government financing agencies as a guideline for policy formulation on the extension of credit financing in the medium-term ranges.

Credit terms are an essential element in international trade markets particularly where price, quality, delivery and service differentials are small.

The survey is similar to a United Kingdom inquiry which was introduced as part of its statistical studies on overseas trade credit and export transactions, 1966, and first published in the Board of

---

*Miss Gianetto is a Research Statistician in the Financial Statistics Branch of Statistics Canada. The survey was carried out by the author.

[1] The latter category is understated and the 31 days' to 180 days' category correspondingly overstated, by about 0.004 percentage points ($51 million) for exports paid through financing agreements under the Export Development Act by which authority the Export Development Corporation is empowered to operate.

For products financed, exporter and importer, see "Annual Report, 1970", Export Development Corporation. The functions of the Corporation are explained below.

TABLE 1. Original Terms of Credit Extended on Selected 1970 Export Sales[1]

Industry group	Total exports		Payments before or against delivery		Credit for not more than 30 days		Credit for 31 days up to 180 days		Credit for 181 days up to 1 year		Credit for over 1 year up to 3 years		Credit for over 3 years up to 5 years		Credit for over 5 years

[1] Commodity groups or classes with export sales exceeding $50 million in 1970.

[2] Includes manufacturers of non-metallic mineral products, scientific and professional equipment and clothing.

Note: In agriculture, credit sales of over one year are overstated, and those of less than one year correspondingly understated by the method of inflation used. Data on government assisted grain sales in the over one year credit categories are complete, and include the down payments on sales to China and Poland.

Trade Journal (since incorporated with the Trade and Industry Journal), of August, 1968.

There are some differences between the two surveys. The United Kingdom survey excludes the exports of oil companies and of public sector corporations. Due to the particular importance of the oil and natural gas exports to Canada, these sales have been included, even though their market is regulated and entails related company dealings for the most part. Less than a half dozen government enterprises were included in the Canadian survey.

To portray the level of related company transactions and the importance of Canada's trade with the United States, company affiliation and trading area designations were added to the survey questionnaire. Field work to test the schedule provided confirmation of what was already suspected, that is, that some industries, at least, make no distinction between the domestic and foreign markets in North America for the exchange of goods and services.

The United Kingdom schedule requested firms to report exports made under guarantee of its Exports Credit Guarantee Department in the "over five years" category. In as much as this information is available from the Export Development Corporation, Canadian firms were not required to show them separately. From the payment experience of the Crown Corporation, it is expected that the bulk of the more than $50 millions in goods shipped by companies in the survey were reported in the short-term categories.

The first two categories used in the United Kingdom survey cover cash or credit up to 60 days and credit of 61-180 days. In the Canadian survey, payments before or against delivery were separated out, from credit up to 30 days, and credit from 31 days to 180 days.[2]

In its international trade credits presentation, the U.K. classifies transactions between members of an international group whose only link is a common overseas parent, i.e., sister companies, as unrelated. Sister companies are considered related in the Canadian context.

There are no comparable American statistics on export credits. However, Klein and Saks, a private consulting firm, is currently making statistical studies of export financing for the Export-Import Bank of the United States on a voluntary basis. Manufacturers, exporters, freight forwarders and banks are being asked to co-operate by phoning in the names of the official of their firm whom the researchers may contact.

Summary of Results

Table 2 illustrates the trade credits on 1970 exports by value and percentage points, for each industry group, extended to related and unrelated companies in four trading areas.

To assist in interpreting the statistics compiled from the returns, definitions of headings and notes on content of items follow.

To maintain a close correspondence to the official export statistics, companies were asked to report the **declared value of exports and re-exports** shown on the Canada Customs Export Entry Form B13, f.o.b. place of lading, i.e., exclusive of inland freight, insurance, handling and other charges. Some firms were unable to report their export sales on this basis, and values entered in their books of account were accepted. In some cases, fiscal year rather than calendar year figures were reported. In respect to these exceptions, the values are more likely to be overstated rather than understated.

A **related** company is defined as a parent, branch, subsidiary, affiliate or associate of the reporting company.

If the exports were billed to a related company (normally a parent) instead of the foreign buyer, corporations were asked to record the terms of credit between their company and the related foreign company, but to enter the area of destination of the commodities shipped. This type of transaction was employed in at least three industries — agriculture, mining and primary metals, and transportation equipment.

Reasonable estimates of the value reported under the time periods were accepted when precise information was not easily available from company records. For the sales for which payment was to be made by instalments, the period of the final payment was taken as the length of credit extended.

Payments before or against delivery include advance or progress payments. However, there is very little prepayment of goods before either title or control passes from seller to buyer.

Most of the export trade is handled by sight drafts under letters of credit, with the confirmed irrevocable letter of credit, involving both domestic and foreign banks as guarantors and agents of payment, affording the most security. Other instruments used are the revocable letter of credit, bills of exchange (drafts), open account used mainly between related companies, and consignment where the exporter does not receive payment until such time as the goods are sold.[3]

---

[2] 1970 U.K. data recently released show changes in the two categories of over 1 year up to 5 years; they now cover credit of over 1 year up to 21 months and over 21 months up to 5 years, instead of the 3 year midpoint.

[3] For a Canadian reference book on export activity including export credit and methods of payment, see John V. Horne, *Essentials of Export,* Sir Isaac Pitman (Canada) Limited, Toronto, 1969.

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2. 3)

The seasonally adjusted index of industrial production showed little change in July at 193.9 compared with 194.0 in June which has been revised down slightly from 194.2. Mining and utilities decreased. The output in manufacturing industries registered an increase on the strength of a 1.8% gain in durable goods production. Non-durable goods output fell by 0.9% in July.

ETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Section 6, Table 16 and Section 10, Table 1)

Between June and July 1972, nine of the eighteen trade groups surveyed experienced increased sales, according to seasonally adjusted ata, thus contributing to an overall rise of 0.3% in Canadian retail trade. The advances in sales, particularly by fuel dealers (11.8%) and amily clothing stores (6.0%) were sufficient to offset the declines ranging from 0.5% in hardware stores to 3.3% in general stores.

Seasonally adjusted new motor vehicle sales (in units) in July 1972 were 13.5% higher than a year ago but 4.6% lower than last month. anadian and U.S. passenger cars recorded a 12.0% increase over July 1971 and a drop of 2.6% over June 1972. The corresponding figures for verseas passenger cars are +9.7% and −4.2%.

NCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

Preliminary estimates indicate a quickened tempo of economic activity in the second quarter, stimulated by strong final domestic emand, particularly consumer expenditure, and by net exports. GNP rose by 3.0 per cent in current dollars and by 2.1 per cent in constant 1961 ollars.

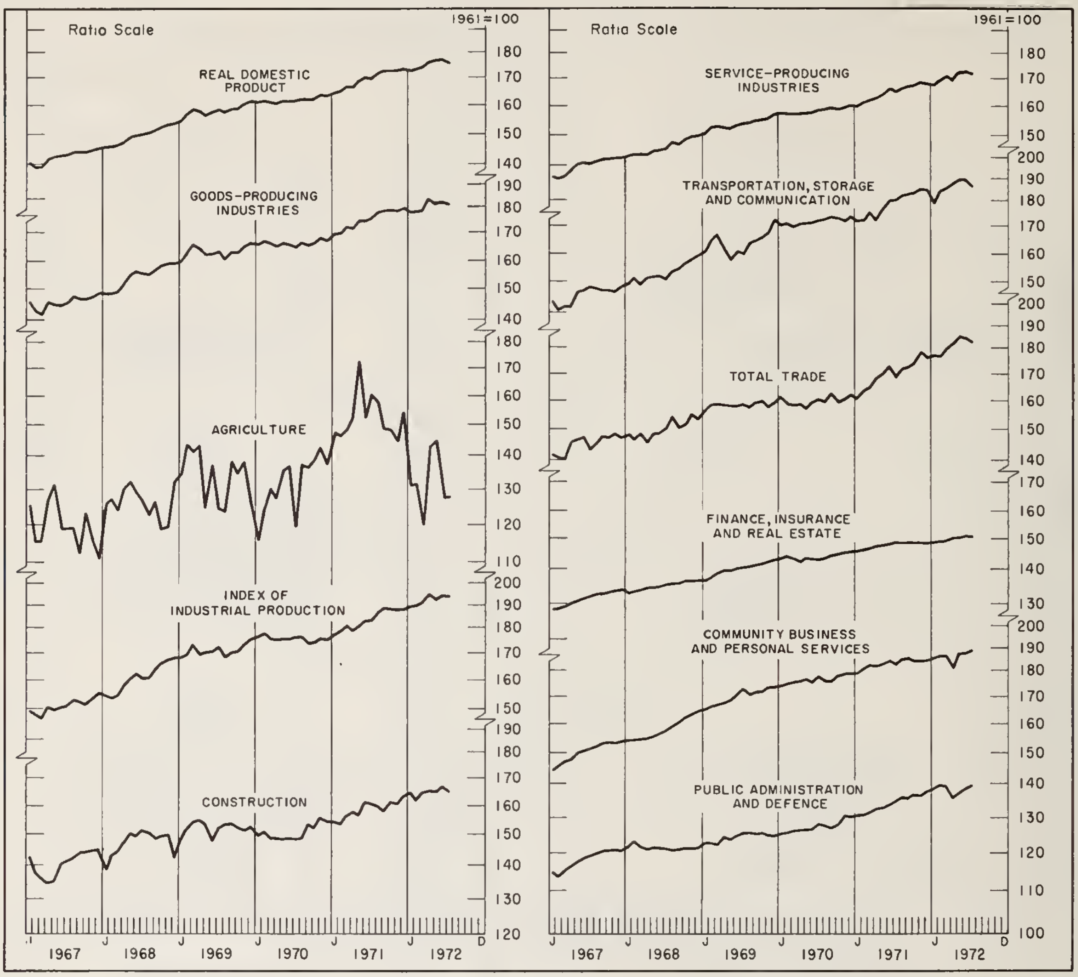
REAL DOMESTIC PRODUCT, (More details in Section 3, Table 2.1)

The seasonally adjusted index of Real Domestic Product for July declined by 0.4% from the revised June level. Both service and goods-producing industries recorded the same percentage decrease. Strikes occurred in iron ore mines, construction, and water transports, affecting other related industries.



real domestic product, by industry of origin, volume indexes (1961=100)

		real domestic product	goods producing industries	agriculture	index of industrial production	construction	service producing industries	trans-portation, storage, commu-nication	trade	finance, insurance and real estate	community, business and personal service industries	public administratio and defence

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documenta evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Cens of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number i non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancée and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises.
[2] Includes the withholding tax applicable to this item.
[3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government.
[4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures.
[5] Includes net income of independent professional practitioners.
[6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures.
[2] Includes outlay on new durable assets such as building and highway construction by governments, other than governmer business enterprises. Excludes defence construction and equipment which is defined as current expenditure.
[3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets.
[4] The book value of inventories is deflated to remove the effect c price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The differenc between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1).
[5] See footnote 4, Table 1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quar-rly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally ward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

Table 2.3: industrial production, volume indexes (1961 = 100), based on the 1960 standard industrial classification – continued

year and month	durable manufacturing															
	primary metal industries					metal fabricating (ex mach. & transportation equipment)							machinery (except electrical)	transp. equipment		
	total	iron & steel mills	steel pipe & tube mills	iron foundries	smelting and refining	total	boiler & plate works	fabricated structural metal	ornamental & architectural metal	metal stamping, pressing & coating	wire & wire products	hardware, tool & cutlery		total	aircraft and parts	motor vehicles[1]

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and other short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: The Labour Force (71-001), Statistics Canada.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment o the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001), Statistics Canada.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001) Statistics Canada.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the onth. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and ublic administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. Source: Employment and Average eekly Wages and Salaries (72-002), Statistics Canada.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping, nor commercial services, plywood households, public administration and defence. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities.** Information on inter-city retail price differentials is contained in technical note No6 published in the June 1969 issue of the Canadian statistical review. [3] The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home ownership costs. [4] Indexes for Quebec City and Thunder Bay are on the (1969 = 100) base. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), Statistics Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.
[5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry.

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities, **does not include imports. Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberto. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normall follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerab change may develop before the completion of the operation. [2] From January 1972 includes Yukon and the North West Territories. **Source: Building Permit (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: New Residential Construction (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1970 and 1971 price indexes are subject to revision. [3] 1971 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

---

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months. [2] Include also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), Statistics Canada.**

Table 1: value of retail trade by type of business and province, based on the 1960 standard industrial classification – concluded

Note: Components may not add to totals due to rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mor gages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owin to doctors, dentists, lawyers, and other personal service credit as they are not available. [2] Owing to the considerable extent of common ownership and overlap o function within these two groups of companies their holdings are treated jointly beginning in January 1970. [3] Conditional sales agreements held by sales financ companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with Januar 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts show exclude unearned finance charges: for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. [4] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usuall repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure b 16.5 per cent. [6] The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form [7] Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing com panies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assump tion that the two series are subject to the same seasonal effects. [8] Bills due for residential/domestic use of telephones, gas and electric power. **Sources Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculate separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most importa are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade Canada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machir have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imp (65-007), Statistics Canada.**

[1] Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

[1] Barrels of 35 Canadian gallons. [2] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [3] Excludes distribution systems. [4] Received from field and processing plants by transport systems. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver-
ges of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign
anks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Total of foreign funds, short
erm foreign investments, and other foreign currency assets less foreign currency liabilities. [7] Excluding Canadian day-to-day loans. [8] Securities purchased
irect from issuer with a term of less than one year at time of issue are classified as loans. [9] Loans to grain dealers and exporters. [10] Loans to finance purchase
f Canada Savings Bonds at time of issue. [11] Including loans to instalment finance companies. [12] These series reflect the combination of two CANSIM series.

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base etals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks cluded in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries xcept electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. [1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontar Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements m under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commerc Failures (61-002) Quarterly, Statistics Canada.**

---

[1] AAO includes countries in Asia, Africa and Oceania.

[2] SCA includes countries in South and Central America.

[3] – signifies that amounts are nil or too small to be rounded.

[4] .. donates that figures have been combined either with those for unrelated companies or with another trading area so as not to divulge exports of than three companies.

Note: Figures may not add due to rounding. The difference between Table 1 and Table 2 is that Table 1 has been inflated to cover all companies in the ven industries whereas Table 2 covers the reporting companies only. Percentage differences between Table 1 and Table 2 are due to a higher rate of non-ponse in the small than the big industries.

It has been pointed out by some respondents that although the figures reported give a general picture of the original terms of credit extended the actual payment experience may be somewhat different. Prolongation of payment occurs mostly around the 30-day limit.

The trading area breakdown points up variations in the pattern by region and the impact of related company transactions.

The percentages quoted below are those shown on Table 2. The overall total and totals for each industry group and for each trading area equal 100%. The same base applies to industry class detail for machinery, food, beverages and tobacco and other manufacturing industries.

Almost one quarter of the export trade reported was handled by payment on or against delivery, with more than half the sales involving inter-related company billings. Sixteen per cent of the trade with the United States fell within this classification, all but 2% in dealings with related companies. Thirty-six per cent of transactions with European buyers (14% related, 22% unrelated) were conducted in this manner, compared to 32% in Asia, Africa and Oceania and 34% in South and Central America.

The proportions to unrelated buyers in the latter two areas are obscured by the inclusion of related company transactions of less than three reporting companies in the transportation equipment and chemical industries, to meet confidentiality requirements.

In the category for credit up to 30 days, embracing just under half of total sales reported, credit terms were fairly well balanced between related and unrelated customers by reason of the large volume of trade with the United States. In fact, 66% of trade with this country occurred within this interval, lending support to the view of Canadian businessmen that the North American market is "open".

Approximately one fifth of trade with buyers in each of the other regions was conducted on these terms of credit with slightly less to related companies in Europe, and in the Middle and Far East, and double the proportion to related companies in South and Central America.

Credit for 31 days to 180 days was extended on 25% of exports. Seventeen per cent of trade with United States came within this span (11% of the total with related firms), compared with 44% with Europe (24% to related companies), 34% with Asia, Africa and Oceania and 31% with South and Central America. Sales to related buyers in the latter regions amounted to 12% and 10% of the respective aggregates.

Only about 3% of exports reported were sold on terms beyond 180 days. One per cent of sales to the United States (related) and to Europe (unrelated) were concluded on this basis; however 15% of sales to Asia, Africa and Oceania and 13% of shipments to South and Central America were encompassed, mostly related.

INDUSTRY ANALYSIS BY SIZE OF EXPORTS

Transportation Equipment

The importance of the Auto Pact with the United States and of related company transactions are highlighted in the data provided by transportation equipment manufacturers.

Total exports reported were $3.2 billion, all but $400 million of which were for motor vehicles, trucks and parts.

Ninety-seven per cent of these sales were on payment before or against delivery or for credit of less than 30 days, demonstrating the practice of open account inter-plant billings with periodic settlement in a North America market. Shipments made to regions other than the United States are normally billed to parent corporations.

Sales made beyond the 30 days credit span were largely for motor vehicle parts to related companies, or for aircraft and aircraft parts, mostly to unrelated buyers, mainly governments.

About 10% of exports were sold to countries other than the United States. The bulk of exports to Europe and the Middle and Far East were aircraft and aircraft parts, those to the other Americas were predominantly motor vehicles and parts.

Pulp, Paper and Lumber

About 70% of sales of pulp, paper and lumber were confined to the two short-term periods, with the balance on credit for 31-180 days.

Of $2.6 billion of reported sales, two thirds were made to the United States distributed as follows: 77% for credit of not more than 30 days, 2% for payment on or against delivery, and 21% for credit from 31 days to 180 days; about two thirds of sales to the United States were to unrelated companies.

Of $460 million sales to Europe, 76% were to unrelated customers, 55% of the sales were on terms beyond 30 days. Exports to Asia, Africa and Oceania, largely unrelated, were mostly for cash or short-term credit, with only 38% on terms of over 30 days. Fifty-seven per cent of sales to the other Americas were on the latter basis.

It should be pointed out that the sales of export merchants, agents and brokers are significant in this industry, particularly with respect to lumber, and companies generally classified to the wholesale trade in production and finance statistics have been included here. Care has been exercised to include only wholesalers acting as principals for export, to avoid double counting.

Mining

The mining industry is another sphere of activity where multi-establishment corporations exist, and it may be more appropriate to consider its export sales in conjunction with those of the primary metals manufacturers.

This course was adopted for Summary Table 1; however, it is thought that area and related data may be more useful analytically when the industries are presented separately. Corporations involved in scrap metal sales have also been classified with mining; hence this industry also contains independent wholesaling activities.

Total exports reported for the industry group amounted to $2.1 billion, more than half of which was entered in the 31-180 days time-frame. A slightly higher value of goods was shipped to Europe than to the United States, $915 million compared to $883 million. The relative proportions to related companies were 49% and 60% respectively.

In the shorter term, only 2% of sales to the United States were on payment before or against delivery, and 40% on 30 day credit; 29% of sales were to unrelated companies in this credit category. Corresponding ratios to Europe were 42% (28% unrelated) and 8%.

Sales to the other two areas followed the same trend. Those sent to Asia, Africa and Oceania in the 31-180 day span were evenly distributed between related and unrelated companies, 31% going to each. The same proportion was sold for cash.

Exports to South and Central America were minor.

Primary Metals

The primary metals industry sold 58% of the value of its export commodities on credit of 31 to 180 days, 44% of it to related buyers. Slightly less than two thirds of sales to the United States fell within the 30 day class; 55% of total sales were related.

About 70% of exports to the African and Asian countries were to related corporations, with a somewhat small share billed on credit up to 30 days. In contrast, most of the sales to the other Americas were unrelated and for credit of 31-180 days.

Petroleum and Natural Gas

Petroleum and natural gas export sales are considered to be understated with respect to intercompany billings. Incomplete returns suggest that virtually all account settlements were made within 30 days.

Agriculture

The agriculture industry data are also incomplete with respect to grain sales. The value and distribution of credit sales of wheat, oats and barley sold under government assistance for periods over one year were obtained from the Grains Programme Office of the Department of Industry, Trade and Commerce.[4] Agents of the Canadian Wheat Board were asked to report directly on sales for which the extension of credit was of less than one year. Considerable difficulty was experienced by the agents in extracting this information. While the bulk of sales are made on the basis of cash against documents, the international grain trade is such that sales may be invoiced to a buyer in a certain area yet shipped in his name or some other name to a different area. The reported related and trading area values are accordingly approximate, and some duplication may exist. The Export Development Corporation is involved in the financing of grain shipments.

About $38 million of shipments of rapeseed, wheat, wheat flour and other foodstuffs purchased by the Canadian Commercial Corporation for the Canadian International Development Agency were added to recorded amounts in the 31-180 days category.[5]

Livestock export sales included in the study are those published in the *Livestock Market Review, 1970*, of the Department of Agriculture, and consist mainly of slaughter and feeder cattle and calves. The sales figures do not cover stock sold by brokers at public stockyards and then exported.

Under regulations respecting stockyards in the Live Stock and Live Stock Products Act, a Shipper's Trust Account is maintained to ensure payment to owners, shippers and consigners of livestock. Payment terms imposed by brokers on foreign buyers are mainly for cash on delivery.

---

[4] Included in the credit figures provided are the down payment requirements of 25% on sales to China and 10% on sales to Poland.

[5] Although government contributions appear in export statistics, these sales were the only sales procured through the Canadian Commercial Corporation included in the survey. Most of other export sales through this federal government agency were identifiable on its return and on those filed by the corporations.

Exports by other government departments were omitted, although three government business enterprises filed returns and were included in the industry in which they operate.

These arrangements were confirmed in an interview with a custom broker and cargo agent which handles a considerable volume of purebred livestock export sales. Returns from exporters of purebred livestock, however, showed sales in the middle and long-term credit classes, mostly covered by insurance against non-payment.

There exists an international understanding on terms of payment for breeding cattle among government finance agencies who are involved in insuring exports of this nature.

Machinery and Metal Fabricating

Of total export sales of $475 million in the machinery and metal fabricating industry group $410 million were reported by about 150 machinery manufacturers, most of them classified to the miscellaneous machinery and equipment class. Except for government assisted grain sales in agriculture, the machinery industry showed the highest percentage of sales beyond 180 days. Thirteen per cent of its sales were of this duration, including 25% of sales to Asia, Africa and Oceania, 10% to South and Central America and 10% to both the United States and Europe.

Forty-seven per cent of exports reported in the credit frame of 0-180 days were to related companies, with agricultural implements being significant in the 31-180 period. Of 13% of goods shipped on payment before or against delivery, about half were billed to related companies. Progress payments would be applicable on sales to unrelated companies. Only about one quarter of the capital goods produced by the industry were sold to regions other than the United States.

In the metal fabricating classes, over half the reported sales were to related companies within the 30 days credit limit.

Electrical Products

The term structure of credit on electrical goods showed 62% sold on credit for more than 30 days, with the balance fairly well divided amongst the other periods. Seventy-eight per cent of sales to the United States were made on credit for not more than 30 days, and 30% were billed to related companies. In comparison, 59% of sales to Europe were for cash or short credit, another 34% came within 31-180 days, including 24% to related companies and 7% within 3 to 5 years.

Over half of sales to Asia, Africa and Oceania were in the long term, as were 30% of exports to the other Americas.

These values included large installation projects requiring charges for engineering services as well as for materials used.

Chemicals and Chemical Products

Three quarters of exports reported in the chemical and chemical products industries involved inter-company billings, over half of them in the 31-180 days interval.

Sales to the United States predominate in the more than 80% purchased by related companies; only 6% were sold for either cash or credit beyond 180 days. European sales followed a similar pattern—77% of sales were to related companies and 4% for cash or beyond 180 days.

For AAO and SCA 15% and 11% of sales respectively fell within the latter categories. Half of sales to each region were to related companies.

Most of the returns were made by manufacturers of industrial chemicals.

Food, Beverages and Tobacco

Industry classes in the food, beverages and tobacco grouping consist of meat and meat products, fish and fish products, fresh and processed vegetables, dairy products, alcoholic beverages and tobacco.

In the non-food classes, most of the commodities went to related companies. Distillers reported all but about $12 million in the credit for more than 30 days time period and only $5 million sold outside of the United States, whereas tobacco manufacturers showed all but $4 million in the payments before or against delivery interval to Europe.

In the food classes, exports of fish and fish products accounted for half of reported sales with only about $18 million billed to related companies. Sales by region were as follows: United States $115 million, Europe $31 million, AAO $5 million, SCA $16 million.

Meat products were next in importance. Of reported sales of over $90 million, 22% were billed to related companies. Most of the sales to the United States were on credit up to 30 days, while those to Europe and Asia were on payment against delivery; on sales to South America credit extension was 31-180 days.

For processed vegetables and dairy products, the trends were similar; all but $8 million of reported vegetable sales of $26 million, $28 million of total reported sales of $33 million of dairy products were sold for cash. Related company sales were not significant in these classes.

The food and beverages industries also reflect exports by independent customs brokers acting as principals, thus embracing some wholesaling activities.

Other Manufacturing

Included in the other manufacturing group are about $73 million in exports by the clothing industry, $52 million reported by exporters of scientific and professional equipment and about $20 million by manufacturers of non-metallic mineral products such as clay products, abrasives and related miscellaneous products.

To avoid contacting many small exporters of clothing, an industry report was obtained from the Clothing Division, Department of Industry, Trade and Commerce.

Approximately 70% of the clothing sales, all classified as unrelated, were made to the United States on credit of not more than 30 days. On the other hand, $18 million exported to Europeans (Western) were on terms of 31 - 180 days and $4 million shipped to the other regions were for cash.

Of the 60% scientific and professional equipment export sales to the United States, half involved related companies in 31 - 180 day transactions. The same terms were accorded European buyers, mostly related, who absorbed 37% of sales; the residual points went mostly to related firms in AAO.

For the non-metallic producers, slightly more than half were billed to related companies in the United States, mostly for cash or credit up to 30 days. Exports to other areas were largely sold at arm's length on conditions beyond 30 days with Europeans the principal purchasers.

Size Distribution of Exporters

An indication of the size of exporters according to exports reported in the survey may be seen from the following table. Eighty-seven corporations with sales over $25 million accounted for almost $10 billion of export sales, and moving further down the scale, 426 exporters executed 92% of exports reported.

Owing to the dominant position of a few corporations in certain industries, an industrial breakdown is not available for distribution. As may be expected, the largest exporters operate in the transportation equipment, mining and pulp and paper industries.

The table is useful in selecting the size of sample if and when future surveys of this type are contemplated.

TABLE 3. Size Distribution of Exporters according to Exports

Size	Reported in survey[1]	
	No. of companies	Value in $ millions
Over $100,000,000	17	6,025·6
" 25,000,000	70	3,919·4
" 5,000,000 - $25,000,000	131	1,457·2
" 1,000,000 - 5,000,000	208	489·7
" 250,000 - 1,000,000	191	106·5
" 100,000 - 250,000	83	13·8
" 50,000 - 100,000	36	2·7
Less than $50,000	76	2·5
Total of returns received	**812**	**12,016·4**

[1] Does not include exports of the clothing industry or government financed sales or official contributions of grain, or data obtained on exports of slaughter and feeder cattle, totalling $363·4 million. The difference in company count is due to NIL, consolidated, incomplete, or inappropriate returns.

Survey Coverage

The coverage of the survey, comprising about 88% of total exports and re-exports in 1970[6] was established by selecting those commodity groups or classes with a value of exports in excess of $50 million. These commodities were cross-classified according to the 1970 Standard Industrial Classification and the Industrial Classification on a Company Basis[7] and involved about 60 industrial classes, regrouped into 11 industries, mostly in manufacturing.

The chronic problem of classifying multi-establishment companies with diversified product lines and integrated extraction, production and distribution systems persisted. Consolidated returns were accepted from parent corporations to ease the burden of response, resulting in spillovers amongst industry groups. Thus, while a corporation was classified to its main activity, it may not always be the activity which gives rise to exports on particular terms of credit. The industry classification can, therefore, only be considered as approximate.

---

[6] See *Trade of Canada, 1970,* Statistics Canada, Catalogue No. 65-210. Subsequent minor revisions to published figures have been incorporated.

[7] See Appendix III, *1970 Standard Industrial Classification Manual,* Industrial Classification on a Company Basis.

The basic working mailing lists for the survey were those used for the pertinent industrv classes in the sample of corporations to collect quarterly financial statistics of industrial corporations. This particular sample includes 100% of corporations with assets of over $5 million, approximately 50% with assets of from $1 million to $5 million, and about 5% with assets of less than $1 million. However, no concerted attempt was made to retain this sample size or to correlate exports to the size of assets or total sales of the exporting company. The basic mailing lists were revised to include the major exporters in the industry, and this revision was accomplished through consultation with officials within the External Trade and the Manufacturing and Primary Industries Division of Statistics Canada, the Department of Industry, Trade and Commerce, the Export Development Corporation, and about 26 trade associations. Trade directories and journals were also examined. A list of about 1,240 corporations was compiled. Of these corporations 970 responded (not counting some late returns), a response rate of 78%.

The assistance of officials of these aforementioned Departments, Agencies and Associations, as well as the co-operation of company contacts, is gratefully acknowledged.

TECHNICAL NOTES

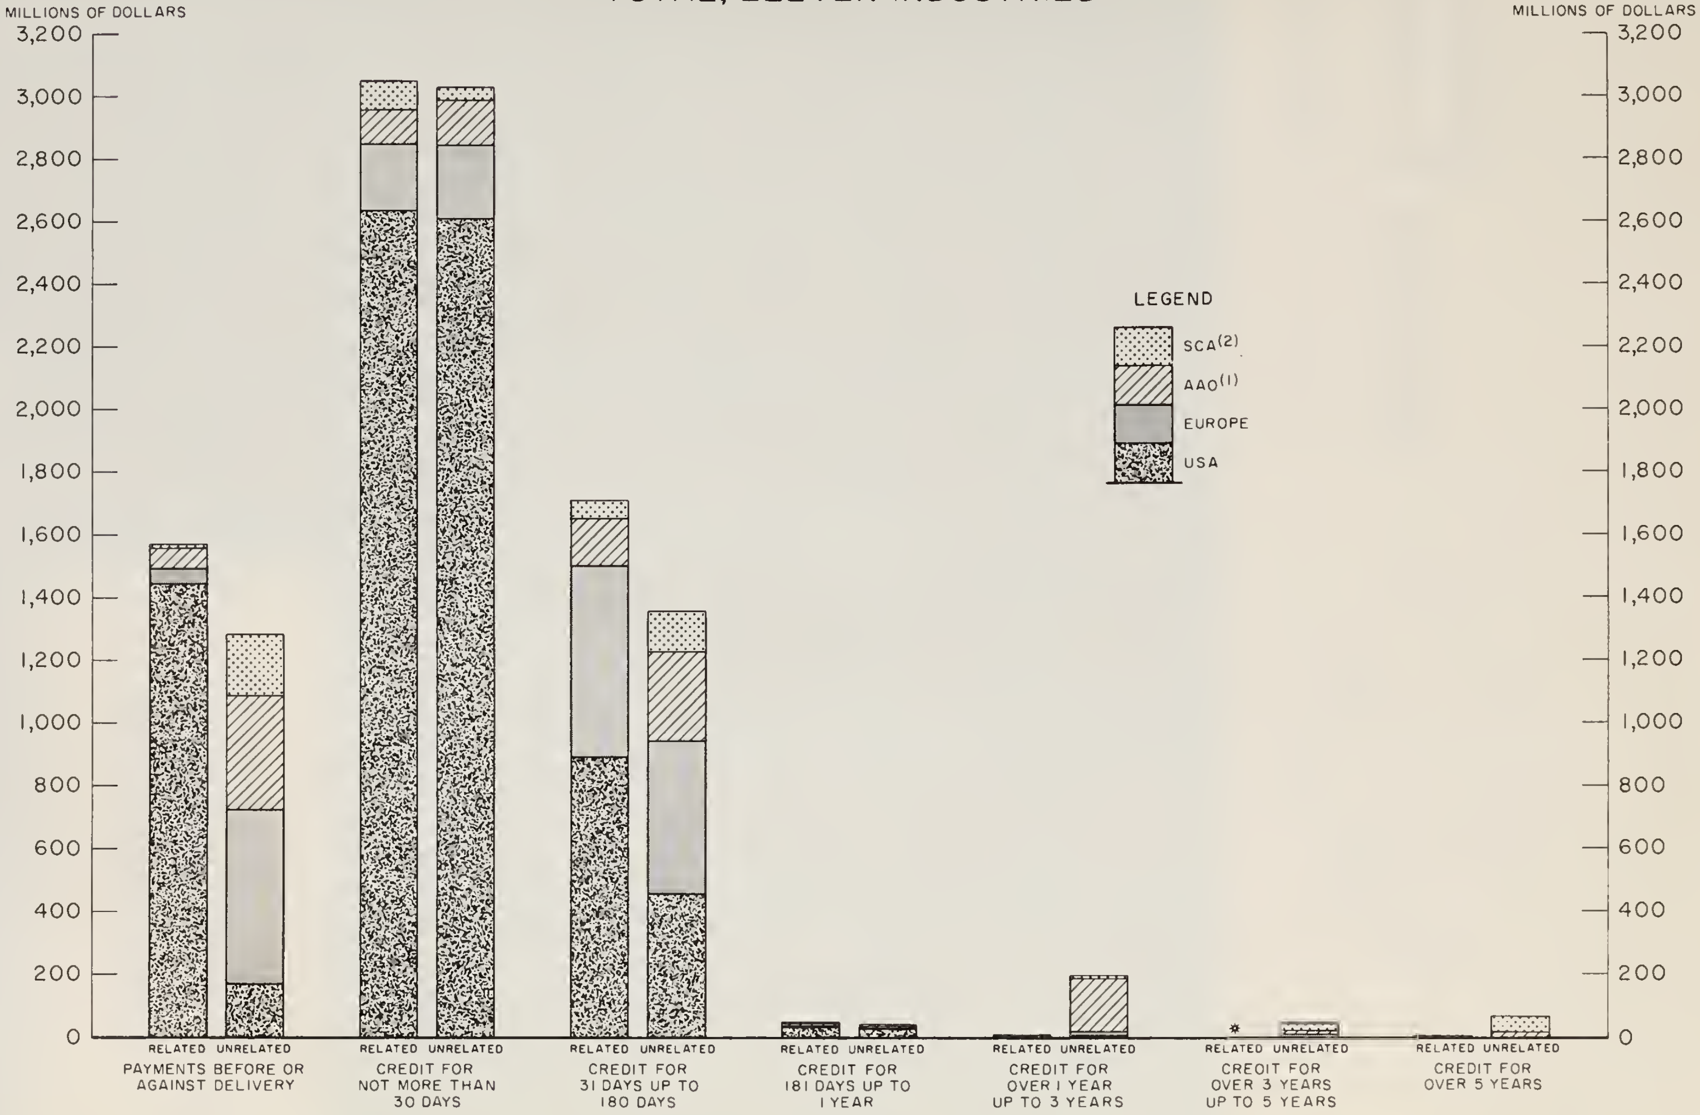
The Questionnaire

1. The schedule was completed by corporations exporting to foreign countries, their Canadian export company or export agent acting under their instructions; or by Canadian export merchants or brokers acting on their own behalf.
2. Corporations were asked to provide the name and address of exporting subsidiaries, if a parent company submitting a consolidated return, to avoid double counting and to obtain an assessment of exports beyond the survey coverage.
3. For the same reasons, corporations were asked to supply the name and address of Canadian export company or agent, if any, acting under instructions of the corporation.
4. Corporations were also asked to indicate if any of their products were sold to Canadian export merchants or brokers acting on their own behalf with respect to foreign buyers.

   This information was required to ensure adequate industry coverage. About 3% of the firms replied in the affirmative, mostly in the food and beverages, lumber and scrap metals industries. Important independent brokers of goods produced in these industry classes were included in the survey.
5. Calendar year figures were requested to correspond to annual export trade statistics based on Canada Customs Export Entry From B 13. If calendar year figures could not be provided, firms were asked to state the fiscal year used. (Previous year figures to provide a basis for fiscal-calendar year adjustment were not considered.)
6. Corporations were asked to specify the principal commodity exported in 1970 in terms of value as a check on industry classification.
7. The essential feature of the questionnaire was the estimate of the value of total exports in Canadian dollars by the length of credit extended to foreign buyers, related and unrelated, in the four designated trading areas of the questionnaire.

ORIGINAL TERMS OF CREDIT EXTENDED ON SELECTED 1970 EXPORT SALES

TOTAL, ELEVEN INDUSTRIES



(1) AAO INCLUDES COUNTRIES IN ASIA, AFRICA AND OCEANIA

(2) SCA INCLUDES COUNTRIES IN SOUTH AND CENTRAL AMERICA

* SIGNIFIES THAT AMOUNTS ARE NIL OR TOO SMALL TO BE ROUNDED.

Progress Report on CANSIM.

Statistics Canada Statistique Canada

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are available in print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 10th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
--	amount too small to be expressed
-	nil or zero.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 1, Table 3, Section 4, Table 12 and 13 – Employment Indexes

The seasonally adjusted employment indexes have been revised from 1961 to date and incorporated in this issue. Historical revisions are available in Catalogue 72-206, *Seasonally Adjusted Index Numbers of Employment.*

Section 3, Table 3 – Financial Flows Matrix

Data for the first quarter 1972 and supplementary revised tables covering first quarter 1971 and annual 1970 and 1971 were published in the September issue of this puhlication.

Publications of Interest

Canadian Statistical Review, Historical Summary 1970, Catalogue 11-505, Occasional (to be released in December 1972). This publication contains annual data for series published in the monthly Review. All the tables include 1970, some 1971, and extend back to 1926, or as far back as available.

Canadian System of Government Financial Management Statistics, Catalogue No. 68-506, Occasional. This publication is a comprehensive background paper to financial statistics on government issued by the Governments Division of Statistics Canada. Its purpose is to facilitate and promote analysis of government financial transactions by describing the scope and limitation of the data currently available for this purpose.

Statistical Profiles of Educational Staff in Community Colleges, Catalogue 81-227, Annual. The present report is the first in a series, to be published annually, presenting information on teachers and administrators at community colleges and similar institutions across Canada.

The Years to 1980, the 9th Annual Review of the Economic Council of Canada, now is available in government bookstores across the country (Catalogue EC21–1/1972, Price $2.50). The Review is based largely on the use of CANDIDE (Canadian Disaggregated Interdepartmental Econometric project) to trace growth prospects through the 1970's. Also released by the Council is a set of staff papers supporting the Review, (EC21–1/1972–1, $3.50) and a 17-page brochure of annotated charts, entitled *A View of the Years to 1980.*

PROGRESS REPORT ON CANSIM

M. Lennox*

Introduction

CANSIM is the name of the Statistics Canada computerized economic time series data bank and its supporting software. It is an information management system designed to serve econometricians and other research economists and also current analysis economists. The system is particularly suited to a central statistical agency like Statistics Canada, which produces perhaps 75% of all Canadian economic statistics. Since the beginning of the CANSIM project 5 years ago, delegates to international statistical conferences from many countries, including Britain, Australia, and Sweden have followed it with interest. Even though the subject was not on the formal agenda of such conferences it has almost invariably been brought up for informal discussion by representatives of countries eager to know how the concept of CANSIM was developing in actual use. Sweden's central statistical agency has introduced a similar system under the name of SWESIM which drew heavily on programming and software provided by Statistics Canada.

The overall system design was described in an *Introduction to CANSIM* published in 1969.[1] Briefly, plans called for staged development over 3 to 5 years of a fully integrated data storage, retrieval and manipulative capability, and a potentially very large data base to be held entirely in direct access memory. A possible exponential data base growth was envisaged, in step with the automation of data surveys in Statistics Canada.

In 1969, when services were first offered, the Data Entry and Housekeeping systems were operational together with an interim, very limited retrieval capability which produced rough tables and created data tapes to serve as input to an existing manipulative package. The system was then resident in-house at Statistics Canada on an IBM 360/65 with the data base stored on 2314 disk packs, operating in batch mode, overnight.

This report describes changes which have occurred since 1969, progress made, and services available now that the system is on-line at the federal government Computer Services Bureau.

Developments Since 1969

Program development, automation, and data base expansion progressed less rapidly than anticipated. However, the sophistication of data users accelerated, and with it, demands for fast access to both data and manipulative software. These demands have increasingly been satisfied by commercial computer service bureaus which offer time-sharing services in conjunction with data available on a special tape created from CANSIM.[2] When we consider that this tape is created once per month, and that current information is entered into CANSIM daily, we can appreciate the extent to which a user will tolerate a substantial loss of timeliness for fast and easy access to data and manipulative programs.

Data Entry

Changes to the Data Entry program were made for the on-line operation:

> For additional security, the entire base is encoded (scrambled). It is possible to "freeze" a series against retrievals. This allows for the entry and verification of data prior to release, for major revisions, etc.

This program is scheduled for major overhaul next year. It is hoped to reduce substantially storage requirements and to incorporate features suited to an interactive time-sharing system.

Retrievals

The CANSIM system now includes a full-scale retrieval capability. Available options listed in Table 1 offer control of the series and number of observations retrieved, choice of a variety of formats, and optional use of two identification numbering systems. A rename option replaces the MASSAGER number carried on some outputs by any 8-character name provided. Another feature soon to be added is an inquiry as to the most recent reference date on the base, and the date when that information was added. Diagram 1 shows a schematic of the Retrieval program depicting decisions and actions taken.

Data Manipulation

The retrieval program will retrieve data for manipulation on a random access device or on tape. Data manipulative capability is provided by three program packages and the U.S. Bureau of the Census X-11 seasonal adjustment programs. Brief descriptions are given in Appendix 1 of MASSAGER, MATOP and FANTOM. There has as yet been no progress on Phase III of CANSIM, which covers the development of integrated data manipulative capability, possibly in an interactive, time-sharing system.

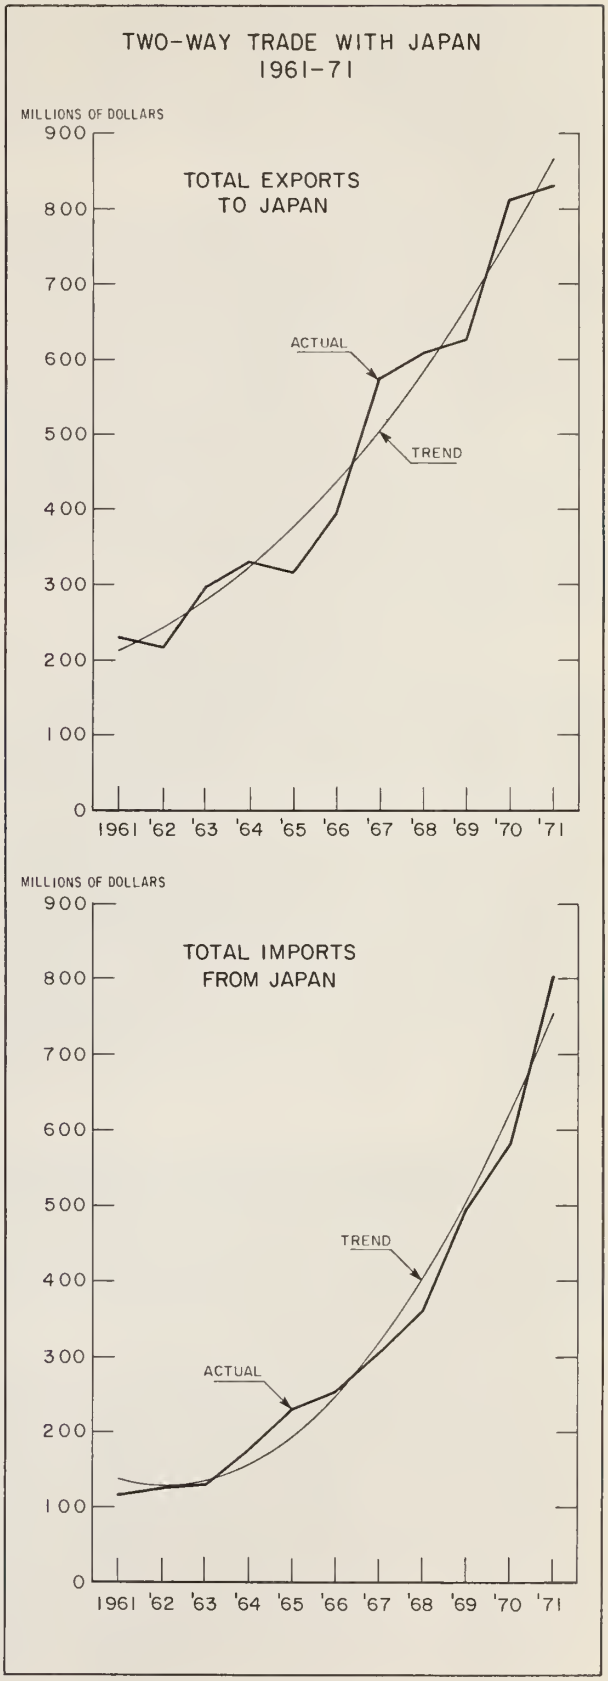
TRADE WITH JAPAN, 1961-71: GROWTH AND STABILITY OF EXPORTS AND IMPORTS

W.M. MacLeod*

Introduction

Trans-Pacific trade, long important to Canada, grew significantly from 1961 to 1971. Recent expansion of government and private activities with countries around the Pacific Rim has emphasized the idea of Canada as a Pacific nation. The purpose of this article is to draw attention to changes that have taken place since 1961 in Canada's two-way merchandise trade with Japan, by far Canada's most important Pacific Rim trading partner after the United States. The rapid growth in this trade is illustrated in Chart 1.

CHART-1



TWO-WAY TRADE WITH JAPAN 1961-71

Aspects of Canadian-Japanese trade are set out in three tables which show (1) the relative size of trade flows for Pacific Rim countries; (2) the commodity pattern of Canada's two-way trade with Japan; and (3) measures of trend, growth rates, acceleration in growth rates of trend, and measures of stability of growth. A description of methods used for these measures is contained in the technical note.

Like Canada, Japan has found in the United States both its major source of imports and its major export market. Demand changes in the United States are quickly reflected in the export industries of both countries and both have accordingly made efforts to reduce this dependence by diversification of trade. This has stimulated an increasing level of Canadian-Japanese trade. Table 1 shows the profile of trade development over the past decade among the developed countries of the Pacific Rim and the emerging nations of Southeast Asia and Latin America.[1] Despite the importance of a number of commodities exported by Canada, it is evident that this country's overall market share of Japanese imports is still small, and that, in addition to Western Europe, other Pacific countries are also important suppliers.

Table 2 and Chart 2 show the estimated impact of Canadian trade with Japan on the growth and stability of Canadian exports from 1961 to 1971 (based on the country and commodity detail contained in Table 3). The trend and variations in trend over the last 11 years of trade are presented both for the aggregate and for different commodity sectors and divisions. In addition, the trend and deviations from trend are shown for Canadian sales and purchases in total and by trading area. Comparison of relative growth rates for countries and commodity groups are shown in Chart 2.

Of particular interest is the 13.7% growth rate in Canadian exports to Japan which has approximated that of sales to the United States (13.6%). However, this growth rate has surpassed by a wide margin that to the European Common Market countries (9.7%). Crude and fabricated materials, contributing $37 and $21 million respectively, largely accounted for the $65 million of annual trend growth. Within these commodity groupings, $40 million was accounted for by metal ores, wood fabricated materials including lumber and veneers, pulp and non-ferrous metals such as copper, aluminum, nickel, lead and zinc.

---

* Mr. MacLeod is Chief, Research and Analysis Section, External Trade Division, Statistics Canada.

[1] Bank of Nova Scotia, *Monthly Review*, Nov. 1968.

The 19.1% annual growth rate of Japanese exports to Canada (from the modest 1961 level of $117 million) is even more noteworthy – greatly exceeding the rate for other suppliers. The annual rate of trend growth, estimated at $62 million, can be largely attributed to end products ($42 million) supplemented by $18 million in fabricated materials. Within these commodity groupings, $33 million was spent on road motor vehicles including automotive products and motorcycles, communication and related equipment (television and radio sets and phonographs) and personal and household goods (clothing, sporting equipment, and home furnishing), while $16 million was added by fabricated textiles and steel materials.

There is no necessary connection between growth and the acceleration of growth shown in columns 4 and 5 in dollars and rates, respectively. Growth can be decreasing, steady, or increasing. What was the experience of the 1960's with respect to Canadian-Japanese trade? Over the period examined, the growth rate for Canadian exports accelerated fairly vigorously, i.e., at 1.75% annually. However, this rate was less significant than for exports to the European Common Market, and in sharp contrast to the deceleration in the rate of trend growth for exports to the United Kingdom, and to Commonwealth and Preference countries. Of $8.3 million acceleration of growth in exports to Japan, crude materials contributed almost $7.7 million with metal ores contributing some $4 million.

The remarkable speeding up of the rate of growth of imports from Japan may not be surprising information. Approximately three quarters of the $16 million of annual trend acceleration was confined to end products, in response to the increasing demand for automotive and motorcycle products, and communication and related equipment.

Cyclical fluctuations in Canadian exports, measured in column 6, have been more pronounced with Japan than with other trading areas except for the European Common Market, where the demand for Canadian products might have widely differing fluctuations. The cyclical behaviour of Canadian exports to Japan, however, was not closely related with overall Canadian exports, as measured by a correlation coefficient of only .38. Consequently, the weighted Japanese contribution to short-run fluctuations in total Canadian exports was reduced to 5%, or $15 million out of $308 million (column 9). Three fifths of cyclical fluctuations in export sales to Japan were accounted for by ores, lumber and other wood fabricated materials. As might be expected, Canadian export earnings from end-products were highly unstable, with cyclical fluctuations amounting to 78% of average export values. However, because this group of exports moved almost independently of the total exports to Japan, its contribution was insignificant.

Cyclical fluctuations in imports from Japan were equally volatile. The negative correlation of their movement with total imports to Canada offset or dampened cyclical fluctuations in imports from other trading areas. Fabricated materials and end-products, specifically iron and steel materials and road motor vehicles, accounted for most of the Japanese export cyclical fluctuations.

The Changing Commodity Pattern of Exports and Imports

Tables 3 A and 3 B provide commodity detail of Canadian-Japanese trade. In 1971, nearly 20% of Canadian exports were from the food, beverage and tobacco section of commodities; 55% from crude or basic materials including flaxseed and rapeseed, minerals and fuels; and 22% from materials requiring more processing such as lumber, pulp, chemicals, and non-ferrous metals. These tables indicate that Japanese demand has shifted over the period, with 20% more of total purchases from Canada taken in the form of crude materials than in 1961, and 22% less in the form of food products like wheat. A large part of this change in the pattern of exports occurred in the early 1960's.

The share of total imports from Japan last year taken by food, beverages and tobacco was less than 3%, down from the 6% at the beginning of the period. The share taken by fabricated materials including iron and steel and metal basic products, textile and chemical products, was 31% in 1971, unchanged from 1961, but lower than the 40% to 44% of requirements taken between 1963 and 1965. The share of the total imports of end-products in 1971 was 65%, close to that of the previous three years but up from the 50% to 59% share of the years 1961 to 1967. This change in the share of end-products imported reflects growing business demand for transportation equipment and machinery, and consumer demand for cars, motorcycles, clothing and other items.

Conclusion

This paper has focused on the measure of growth and stability of exports and imports in trade with Japan. Trend growth of exports and imports has been linked with crude and fabricated materials for the former and with end products for the latter. Export and import instability has been associated with crude and fabricated materials for the former

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2.3)

The seasonally adjusted index of industrial production decreased by 0.8% in August to 192.3 from 193.8 in July which has been revised down slightly from 193.9. The manufacturing, mining and electric power, gas and water divisions all declined with manufacturing contributing mor than half. Within manufacturing declines were widespread. The output of durable goods declined by 1.0%, while non-durables recorded only a 0.4 decrease.

ETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Section 6, Table 16 and Section 10, Table 1)

A reversal in trend in seasonally adjusted retail sales for August was evident in a 0.7% decrease in total sales from the previous month ollowing declines in all except five of the eighteen trade groups. The most notable declines were in jewellery stores (-8.1%) and family clothing tores (-7.4%). The largest gain registered was that of fuel dealers whose sales increased by 3.8%.

PRICES (More detail in Section 5; 13; respective Tables 2, 3 & 4; 8.)[1]

The Consumer Price Index rose 0.4% between August and September mainly because of a 0.7% advance in food prices; food prices have usually decreased between these two months in recent years.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of document evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Cens of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancé and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes ne income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than governmen business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and govern ment business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect o price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and other short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measures of current, capital and reserve movements and embodies all unidentified transactions. [5] Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement.

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: The Labour Force (71-001). Statistics Canada.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment o the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001). Statistics Canada.**

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001), Statistics Canada.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities.** Information on inter-city retail price differentials is contained in technical note No6 published in the June 1969 issue of the Canadian statistical review. [3] The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home ownership costs. [4] Indexes for Quebec City and Thunder Bay are on the (1969 = 100) base. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month						ratio of inventories owned to shipments
						all inventory held				
				owned[3]	held but not owned	total	raw materials	goods in process	finished products

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), Statistics Canada.**

---

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export. Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural stee fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities, **does not include imports.** **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Permits (64-001), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. [2] From January 1972 includes Yukon and the North West Territories. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: New Residential Construction (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1970 and 1971 price indexes are subject to revision. [3] 1971 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due t changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all othe stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals due to rounding and partial revisions. [1]Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2]Includes loans on the security of household property. [3]Not available on a monthly basis. [4]Includes loans to finance companies which are affiliates of retail merchandisers. [5]Religious, educational, health and welfare institutions. [6]Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies. **Sources: Statistical Summary, Bank of Canada and Dept. of Finance.**

Note: Components may not add to totals due to rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges: for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. [4] Personal cash loans of up to $1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. [6] The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. [7] Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. [8] Bills due for residential/domestic use of telephones, gas and electric power. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

Table 4: merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) (000 tons)	total revenue cars loaded (carload only)	farm products and food						mine products				forest products		
			wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash[2]	coal, sand, cement and other mine products	lumber and plywood	pulpwood	other forest products

[1] Based on weekly (monthly in 1970) carloadings reported by major lines carrying over 99% of railway traffic in Canada. [2] Included in other manufactures and miscellaneous prior to 1970. [3] Includes small tonnage of express traffic not available before 1970. [4] Receipts from U.S. connections not separated from receipts from other Canadian roads before 1970. [5] Data prior to 1970 not comparable with current data. [6] Thousand tons. **Source: Monthly Report, Railway Car Loadings (52-001), (Weekly, Prior to 1970), Railway Freight Traffic (52-002), Statistics Canada.**

[1] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500, 000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [2] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.**

[1] Includes Class 1 carriers only. These are carriers having $100, 000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [2] Includes Class I and Class II carriers only. These are trucking firms having $100, 000 or more gross annual operating revenues. [3] Includes Class I carriers only. These are carriers having $100, 000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight (53-005) quarterly, Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, Statistics Canada.**

[1] Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest irlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair nd Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is xcluded prior to 1970. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) tatistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Total of foreign funds, short term foreign investments, and other foreign currency assets less foreign currency liabilities. [7] Excluding Canadian day-to-day loans. [8] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [9] Loans to grain dealers and exporters. [10] Loans to finance purchase of Canada Savings Bonds at time of issue. [11] Including loans to instalment finance companies. [12] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base etals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks cluded in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries xcept electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices d Price Indexes (62-002), Statistics Canada.**

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does nc include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements mad under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercia Failures (61-002) Quarterly, Statistics Canada.**

and with fabricated materials and end-products for the latter. Massell in a recent study of 55 countries developed a theoretical model (hypothesis) relating intercountry differences to several structural variables.[2] He found countries deriving a large percentage of export earnings from food had less export instability than those heavily dependent on raw materials or manufactures, which emphasized the importance of shifts in foreign demand as a source of export instability. The important regional impact of these changes, particularly in Western Canada, and considerations about possible trade developments in the 1970's can be examined elsewhere. Prof. Hay[3] has written:

> ". . . this is not a song of unparalleled optimism on future trade prospects. Our analysis does not lead us to follow those who argue that Japan will be "number one in 2001"; nevertheless, the reader will surely gather that Canadian-Japanese trade has features, even within view, that are quite startling in their variety and magnitude. These trade opportunities are enormous for both partners . . .".

One can add that the shift to high technology-based industries in Japan may bring about changes in their imports as Japanese industries call for more semi-manufactured products rather than unprocessed materials. If Canada successfully competes in this business, the 1970 trade trends will differ sharply from those examined for the last decade.

Technical Note on Denton Method Used in Calculating Measures of Growth and Stability Contained in Table 2

Growth and stability of export receipts and import purchases in this trade are measured by a simple regression analysis involving: (1) fitting a line of trend to a number of series; (2) measuring first and second derivatives or differences along this trend line to determine growth **and** acceleration or retardation of growth; (3) measuring the spread between the trend and actual export or import values to ascertain stability of growth; and (4) determining the contribution of components to the total.[4] Growth and stability of Japanese trade is related to Canada's overall trade, and commodity groups are identified that are associated with these changes.

1. Trend and Rate of Growth

The regression fitted to the data was:

$Y = b_0 + b_1t + b_2t^2$
where Y refers to exports or imports,
and t to time in years.

For convenience, t was set equal to zero at the mid-point of the period, 1966. Calculation of the values of b_0, b_1, and b_2 yielded trend values for 1961 ($t = -5$) and each succeeding year. To determine growth rates, it should be noted that both differences and derivatives express rates for change over time, the former as averages during whole periods (see Chart 1), and the latter instantaneously. Growth and fluctuations in growth can be generated by either—differences yielding small jumps once per period and derivatives yielding continuous change. One can take the first derivative with respect to time of the fitted trend line at the middle of the period, i.e., b_1, or the mean first difference along the trend line to define the rate of trend growth. The ratio of either of these to average exports or imports will yield the average relative growth rate.

2. Acceleration of Trend (Actual $) and Relative Percentage Rate of Acceleration of Trend

Utilizing the estimates of trend and rate of growth, acceleration or retardation of growth can then be determined by the second derivative of the fitted trend line with respect to time, i.e., $2\ b_2$, or the mean of the second differences along the trend line (the first difference of first differences). One should stress that acceleration of exports or imports has no necessary connection with the rate of growth of exports or imports since the magnitude of the second derivative of a function at any point is quite independent of the first derivative. The relative rate of trend acceleration is taken by the ratio of trend acceleration to average exports or imports.

3. Stability of Export Earnings, or Import Payments

The standard error of the residuals of the fitted trend line is taken as a measure of stability of export earnings or import payments. Ratios of these standard errors to average exports or imports provide suitable relative measures of variation in individual series.

4. Contribution of Components to the Total

Trend growth and trend acceleration of the individual series sum to the values for the total series. In these cases, contribution of a part to a total is straightforward. However, the standard error of a total is not the simple sum of the standard errors of its parts. Fortunately, if the standard errors of the parts are weighted by their correlation coefficients with the total, the weighted standard errors of the parts will sum to the standard error of the total. The contribution to the stability of total export receipts or import purchases can then be defined by these weighted standard errors.

Progress Report on CANSIM *(Continued from page 4)*

Statistics on Use

A statistical package is produced automatically as part of the retrieval package. The computer records such data as: the number of times each series is accessed, and for what type of retrieval output; whether retrieval is by the owner of the series or by other users; the period for which the data are retrieved, by decade; whether or not the retrieval was successful, etc. This information will be a valuable guide to future development. At present, the system is both a research project and a functioning on-line system. All data fed into the computer are stored on-line, instantly accessible, in accordance with the perception of CANSIM's creators that it should provide as rapid and complete a service as possible. By analyzing the access information provided by CANSIM's statistical package, it will become possible to determine empirically which data are in greatest demand and, should capacity limitations emerge, which series should be held on-line and which transferred to tape or other storage.

Table Formatting

A minimum table formatting capability will shortly be available which will interface with a local service bureau specializing in photo-composition.

Data Bank Contents

The CANSIM base has grown from 7,000 series in 1969 to 28,000 as of August 1972. It contains economic time series which originate for the most part in Statistics Canada. Historical data are included from 1946 wherever possible. Automation of data updates has so far been accomplished for the monthly Labour Force and Employment surveys; Manufacturing Shipments, Inventories and Orders; the Income and Expenditure Accounts and the Indexes of Real Domestic Product.

Directories

The *Summary Reference Index*,[3] which gives matrix (or table) numbers, is the key to the *CANSIM Series Directory*[4] and so to the CANSIM data bank. In Appendices 2 and 3 are given the explanatory foreword of the Index, and a sample Series Directory. Both the Index and the Directory are reprinted annually and updated by monthly supplements.

CANSIM NEWS FLASH

A new service has been introduced for the benefit of customers with terminals. The CANSIM NEWS FLASH is an information file stored on-line which provides daily information on series updated.

Inquiries Directory

Responsibility for the quality and confidentiality of series rests with the data supplying division or other source. An Inquiries Directory is now available which provides the names and telephone numbers of officers to whom inquiries may be directed.

Services Available

The CANSIM data base, system programs and supplementary manipulative packages are, for the present, resident on-line at the federal government Computer Services Bureau to which federal and other government departments and agencies have access. It is hoped that, on the basis of experience gained with this limited market, it will be possible to formulate plans for providing similar service to non-government customers within the next few months. In the interim, Statistics Canada provides data retrieval service on request to government or other customers. Orders are normally executed within 24 hours.

Charges

CANSIM charges to non-government customers remain at 15 cents per series per retrieval, on printouts or on customer-supplied tapes. The $25.00 minimum charge is unchanged for tapes but has been reduced to $5.00 for printouts. A special reduced rate has been introduced for orders of 1,000 or more series, made up of computer costs plus 50%.

Customers using CANSIM directly via terminals or over the counter pay the Computer Services Bureau for computer costs and pay a CANSIM charge to Statistics Canada. The CANSIM charge (now 10%) is levied as a percentage of computer charges related to the Data Entry, Retrieval and Housekeeping programs.

Users Manual Revised

The CANSIM Users Manual for Retrieval and Manipulation[5] is currently being revised to incorporate options and formats available in the new retrieval program.

Conclusion

The first two phases of CANSIM development of data entry and retrieval have now been completed and experience is being gained with providing service on-line. The data base growth, although substantial, has fallen short of expectations and has proven to be closely linked to the rate of survey automation in the bureau. Customers now appear to demand not only machine-readable data but access to data and software in an interactive, time-sharing system. We are preparing to move into Phase III development which will attempt to meet these demands.

Table 1. Summary of Retrieval Output Formats and Options

(a) Retrieval Formats

1. MASSAGER: Serves as input to DATABANK-MASSAGER programs operational on an IBM system/360. Available in either single or double precision and may be created on tape, disk, or cards.
2. UTILITY: A file in the general purpose format of Statistics Canada. Serves as input to MASSAGER, FANTOM, MATOP, X-11 Seasonal Adjustment, GROPE (plotter) and to any utility program where the input may be described by a format card. May be created on tape or disk.
3. PUBLICATION: A file containing data and all information stored for the series retrieved. It is intended for use with report generating programs for automating publications. May be created on tape or disk.
4. RANDOM: A randomly accessible file for use as input to the MASSAGER program with random access feature. Available in either single or double precision.
5. TABLE: A printout of series in columns. Matrix title, matrix notes, series titles, and footnotes are included.
6. DISPLAY: A printout of one series per page with data in rows. Includes matrix title and notes, series titles, footnotes and source.
7. RE-ENTRY: An output in Entry format to re-create the matrix header, series header, and data points. May be created on tape, disk or cards.

(b) Retrieval Options

1. Retrieve data by CANSIM or MASSAGER identifier.
2. Request pre-edit (diagnostic edit) of retrieval command cards.
3. Override to accept errors and continue a job.
4. Retrieve all series in a range of matrices.
5. Retrieve specified series in a range of matrices.
6. Specify time period to be retrieved.
7. Control the number of data columns per page in Table Format (up to a maximum of seven).
8. Change MASSAGER identifier on output (RENAME).

APPENDIX 1

Supplementary Programs Available for Use with Data Retrieved from CANSIM

1. DATABANK

The DATABANK program is designed to store and maintain a large number of economic time series on a **single** magnetic tape. Generally, this restricts the number of series that can be handled efficiently to about 10,000. The program allows for the addition, deletion and editing of any series. The data can also be listed, indexed and copied onto other tapes. In other words, the program performs those operations which fall into the general class of file maintenance. The system is designed to work with any data which is arranged or arrangeable in a time series format.

2. MASSAGER

The MASSAGER program carries out statistical manipulations of data, accepts input from the DATABANK tape, from the CANSIM tape (MASSAGER format), or from cards.

Retrieved series are arrayed as columns in core storage and by a sequence of "commands" the columns are manipulated as desired. The commands include simple operations on a single series (column) such as square roots, logarithms, etc., and complex operations on several variables or columns such as multiple regressions, plots, etc.

3. MATOP

The MATOP program was originally written in Statistics Canada. Other versions have since been developed with added features. It accepts input from tapes from CANSIM, DATABANK tapes, or from cards. The data may be entered in memory as columns, rows or as a matrix. The program carries out mathematical and statistical manipulations of data.

4. FANTOM

This package of pre-coded sub-routines serves basically the same purpose as MATOP. It has been rewritten with free form English language commands. Other features have been included which add flexibility. One important simplification is the manner in which the user must reserve core.

Relationship of CANSIM to the DATABANK-MASSAGER Programs

In 1966 Statistics Canada agreed to develop and maintain a time series data bank and, to this end, to assume responsibility for the DATABANK and MASSAGER programs which had been developed at the Economic Council of Canada. These two programs were to be modified for the IBM System/360 model 65 then being installed at the federal computer service bureau; meanwhile, preparations were made for loading of the first data block containing all series published in the monthly *Canadian Statistical Review.*

In 1967, when the decision was taken to develop a fully-integrated data storage, retrieval and manipulative system (CANSIM), priority was given to developing capability for efficient, frequent handling of a large number of time series. During development of the data entry program, use of the DATABANK program was continued. In 1968, pending development of a full CANSIM retrieval system and integrated manipulative capability, the Bank of Canada assumed responsibility for the DATABANK-MASSAGER programs. In order to make data available to the public, the pre-CANSIM master tape was copied and sold. After the base was transferred from DATABANK to CANSIM, simulated DATABANK master tapes were created from CANSIM, containing data in the *Canadian Statistical Review*, plus some supplementary series. This was the origin of the present CANSIM "Retrieve in Massager format" and of the now widely used *Canadian Statistical Review* Public (Standard) tape.

The present status of the DATABANK-MASSAGER programs in relation to CANSIM is as follows:

(i) Both programs are included in the set of supplementary programs available with the CANSIM system.

(ii) Two available CANSIM tape formats, the UTILITY and the MASSAGER format, serve as input to the MASSAGER program for data manipulation.

(iii) These programs are frequently recommended when inquiries are received from customers wishing to establish private data banks. Given access to a suitable computer installation, these programs can be used in conjunction with data purchased from CANSIM to store and maintain private series, and to carry out data manipulation.

The version of the programs now in the CANSIM program set is that maintained by the Bank of Canada and available at nominal cost through COMPUTEL, Ottawa. It is possible that a revised standard version will eventually be maintained and distributed by Statistics Canada. If so, it will be available for the IBM System/360, the Univac 1108, and the CDC 6600, and will remain in the public domain.

APPENDIX 2

CANSIM (Canadian Socio-Economic Information Management System)

Foreword

This *Summary Reference Index*[1] represents a key to the contents of CANSIM, the Statistics Canada computerized time series data bank, and is the first step in locating and ordering time series from the system.[2] The Table of Contents lists those publications for which data are now stored in the data bank in full or in large part. For each publication, in turn, there is a modified table of contents which gives for each data set in the data bank its CANSIM matrix identification number or numbers. A "matrix" in CANSIM is roughly equivalent to a "table" and contains a number of related time series. Additional sets of series will be stored in CANSIM as time and resources permit. Availability of new data blocks will be announced periodically in the *Statistics Canada Daily.*

As the initial step in ordering data which is stored in CANSIM, the user locates in this index the general area of interest, and then the specific matrices. The CANSIM matrix numbers at the right of the page are then used to locate the data set in the Series Directory. The Series Directory lists the matrices sequentially by matrix number, and provides for each a descriptive title, data source, a matrix note and a list of the titles and other descriptive details for all included series (see sample).

To order series the CANSIM matrix and series identifiers are required. The data requisitioning process is described in detail in the *CANSIM Users Manual* (Item C below).

ARTICLE:

National Income and Expenditure Accounts, 3rd Quarter 1972.

Statistics Canada Statistique Canada

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are available in print-outs or from CANSIM, the computerized time series data bank of Statistics Canada, in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 10th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * * * *

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
--	amount too small to be expressed
-	nil or zero.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 1, Table 8. Section 13, Table 4 – Cheques Cashed in Clearing Centres

Revisions to the seasonally adjusted series commence January 1970. Historical revisions are contained in the November 24, 1972 Weekly Supplement to this publication, Catalogue 11-004.

Section 1, Table 8 – Rail Revenue Freight Loaded

This series has been revised from January 1970. Historical revisions are included in the December 8, 1972 Weekly Supplement to this publication, Catalogue 11-004.

Section 1, Table 11 – Total Industry Selling Price Index

The series introduced with this issue is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mill Industry and then are implicitly counted again through full weighting of the shipment prices of the manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc. (continued on p. 114).

Source: Prices and Price Indexes (Catalogue 62-002). Statistics Canada.

Section 4, Table 1 – Wages and Salaries by Provinces

Monthly estimates by province have been revised from 1947 to date. Historical revisions are available in the April-September issue of *Estimates of Labour Income*, Catalogue 72-005.

Section 4, Table 3 to Table 10

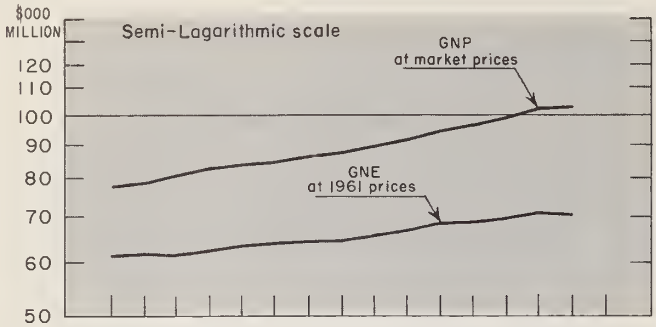
Change to the 1970 Standard Industrial Classification: In the period January through March, the Labour Force Survey was double coded to both the 1970 and 1960 S.I.C.'s. An examination of the results found no significant differences at the level at which the statistics are published and, as a result, the 1960 S.I.C. coding was simply dropped at that point. There was no need to make any revisions to published data and it should simply be noted that the statistics are now on the 1970 S.I.C.

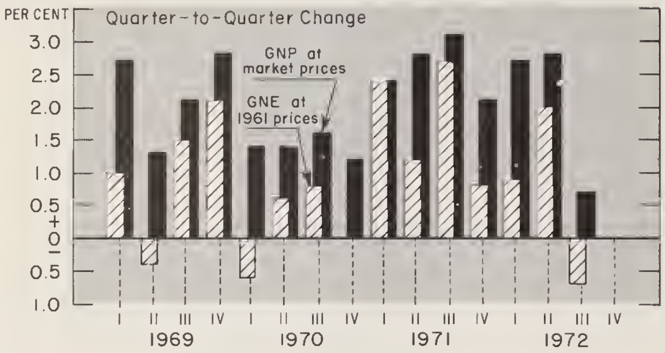
Publication of Interest

Travel, Tourism and Outdoor Recreation, Catalogue 66-202 Annual. The present publication is the first of an annual series containing statistics on Travel, Tourism and Outdoor Recreation. Information has been drawn from a wide variety of sources, both from within Statistics Canada and elsewhere.

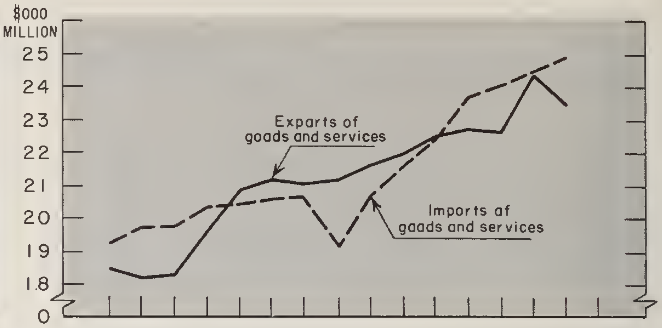
Pension Plans in Canada, Catalogue No. 74-401, Biennial. This report is the first in a planned series of publications to be produced from information stored in a new pension "data bank" developed at Statistics Canada. Using administrative documents as the primary data source, this new programme makes it possible for the first time to collect and maintain a complete, comprehensive and regularly up-dated computerized record of the characteristics of most pension plans in Canada. The data bank, together with a specially designed flexible and rapid retrieval capability, represent major breakthroughs in pension information systems creating a remarkably efficient data source for pension planning and analysis.

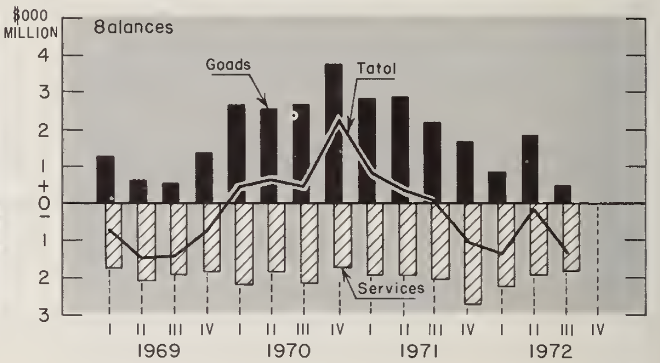
GNP at market prices rose 0.7 per cent to $102.7 billion. Discounted for price increases, GNE dropped by 0.7 per cent.



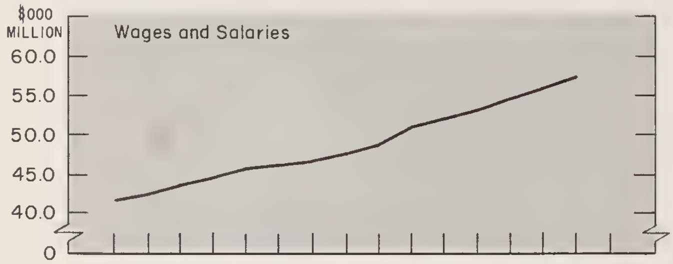


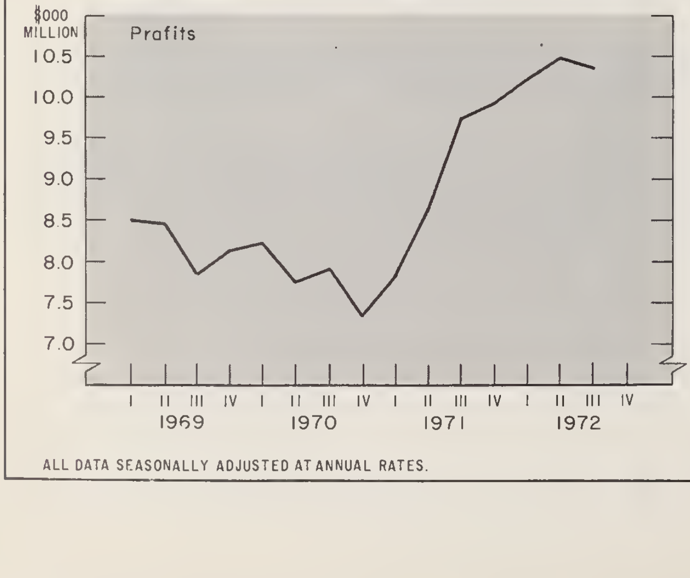
The major source of weakness in the third quarter was the sharp reduction of $1,368 million on merchandise surplu



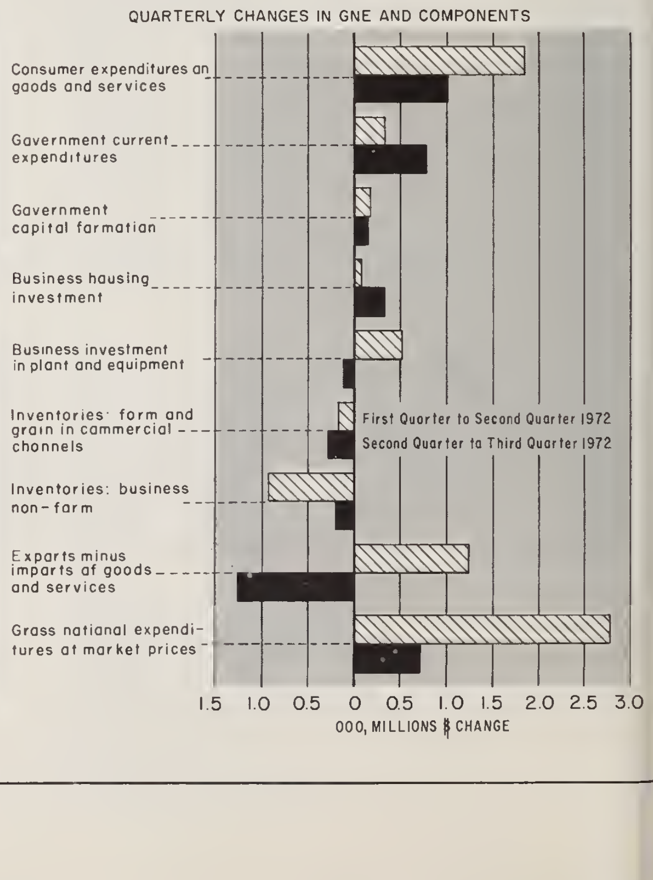


Wages and salaries continued to rise strongly by 2.2 per cent but corporation profits posted a small decline....





...while on the expenditure side, the only components to show an acceleration were government current expenditures and business housing investment.



ALL DATA SEASONALLY ADJUSTED AT ANNUAL RATES.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS

THIRD QUARTER 1972

Preliminary estimates of the National Income and Expenditure Accounts indicate a slackening in the pace of economic activity in the third quarter, following the very strong second quarter expansion. The moderation in demand, while widespread, was most evident in the external sector as exports declined sharply, partly due to dock strikes in Canada and abroad.

Gross National Product, seasonally adjusted at annual rates, rose to an estimated level of $102.7 billion, an increase of $724 million compared with increases of between $2 and $3 billion realized since the beginning of 1971. The increase of 0.7% in the third quarter compared with an increase of 2.8% in the second quarter. Mostly due to large changes in the composition of demand, the implicit price index for GNP rose at an accelerated pace, 1.4% compared with 0.8% in the second quarter, the price rise would have been about 1%. In volume terms, production shows a 0.7% decline.

By far the major source of weakness in the third quarter was the $1,256 million increase in the deficit in transactions on goods and services with non-residents, which was mostly due to declining merchandise exports, following a very high second quarter level. An extended shutdown of a major automobile plant in Canada to switch its product line, as well as dock strikes on the Canadian West coast and in the United Kingdom were special factors affecting the flow of some merchandise trade during the quarter. The irregular pattern displayed by exports over the period July to October which resulted in an unusually low July level and a peak level in October, suggest that the phasing of production and demand measures may be slightly distorted in the current period. If an assumption of recording lags is correct, some of the strength which appears in October exports may more appropriately belong in the third quarter. This factor would account for the rather weaker picture presented for production in the third quarter, as measured by the expenditure components, than that recorded by the income measure.

Most other categories of demand also displayed relative weakness. Consumer outlays on goods and services, which account for nearly 60% of total GNP, rose at a much reduced pace than in the exceptionally strong second quarter and business outlays on plant and equipment and on inventory investment declined. By contrast, government outlays on goods and services and housing investment rose strongly in the third quarter.

Consumer expenditure on goods and services rose by an estimated $1.0 billion, or 1.7% to an annual rate of $60.2 billion. This was a substantially smaller increase than any since the first quarter of 1971, although these expenditures are running 10% over their level a year ago. In recent quarters, increases in expenditure on goods, particularly automobiles, have tended to dominate total expenditure. By contrast, in the third quarter, two thirds of the total gain was centered in outlays on services, which showed a marked acceleration, while expenditure on goods increased only 0.9% from the very high level achieved in the second quarter, when it rose by an unusually sharp 4.1%.

Though evident in all three major goods categories, the softening in demand was most pronounced in expenditure on durable goods. Spending in this category, which had shown a 5.7% increase in the second quarter, remained practically level in the quarter. A notable feature was the 5% decline in purchases of new and used automobiles, after a 17% increase in the second quarter. The acceleration in expenditure on services, up 2.9% compared with 1.8% in the second quarter, reflected increases in educational and cultural services, communications and purchased transportation.

Taken together, government current and capital outlays on goods and services rose by $972 million, or 4.1%, about twice the rate of increase in the second quarter. Current expenditure on goods and services rose by $776 million or 3.9%; capital expenditure rose by $196 million, or 4.9%. A rebound in wages and salaries from the strike-affected second quarter was a major factor in the increase in spending; by level of government, most of the gain took place at the provincial and local levels.

As already noted, the housing sector also experienced sharply increased activity in the third quarter. The surge in outlays of 6.3% followed a marginal increase in the second quarter, when construction, particularly of apartment buildings, was affected by prolonged labour disputes in British Columbia. Construction of apartment buildings rebounded strongly in the quarter. Outlays on single dwellings, however, declined, following five consecutive quarterly increases. The level of investment in housing was running at $5,352 million in the third quarter, or some 20% above the year 1971.

Apart from housing, business fixed investment spending declined in the quarter, as a small rise of 0.7% in non-residential construction was more than offset by a 2.2% decline in outlays on machinery and equipment. The decline in the latter, which followed strong rises in the first half of the year, appeared broadly based. The only gain recorded in the third quarter was in outlays on farm implements. In spite of the third quarter slowdown, estimated business spending on plant and equipment during the first three quarters was running somewhat ahead of the anticipated spending reported in the mid-year survey of private and public investment intentions, which suggests an increase of about 7% for the year.

The rate of investment in both non-farm and farm inventories declined in the third quarter. In the former, an accumulation of $156 million in the second quarter gave way to a small decumulation of $40 million in the third quarter, entirely due to a large and widespread decline in wholesale trade. In manufacturing, the value of physical change was little changed, as accumulations in most durable goods industries were offset by decumulations in non-durable goods industries. The $172 million accumulation in retail trade reflected mixed movements, the most notable being a large accumulation by motor vehicle dealers and a large decumulation by food stores. The substantial $500 million decumulation in farm inventories was mainly due to diminished stocks of grain in elevators, in line with sharply rising exports of these commodities.

The striking feature in the external sector was the sharp drop of 3.5% in exports following an even more unusual increase of 7.4% in the quarter. All of the third quarter decline occurred in merchandise exports, which fell by 5.5%. By country of destination, declines were widespread, particularly to the United States and the United Kingdom. On a commodity basis, there are indications of sharp declines in newsprint, automobiles and other motor vehicles while increases were recorded in wheat, lumber, woodpulp and motor vehicle engines. As has already been noted, advance estimates of merchandise exports for the month of October indicate a record level.

Imports of goods and services rose by a moderate 1.7% in the third quarter — a rate of increase comparable to that of 1.9% shown in the previous quarter. Among merchandise imports, which rose by 1.4%, substantial increases were recorded in fruits and vegetables, automobiles, trucks, and miscellaneous equipment tools.

The third quarter developments in merchandise trade resulted in a $1,368 million deterioration in the merchandise surplus, from $1,840 million to $472 million. The non-merchandise balance on the other hand improved slightly by $112 million, as service receipts rose faster than service payments.

The income side of the accounts does not indicate the same degree of moderation in economic activity in the third quarter as the expenditure side. Labour income continued to rise at a sizable rate, 2.2% compared with 2.0% in the second quarter, while very preliminary estimates of corporation profits point to a small decline. Other income components showed mixed and largely offsetting movements.

Industrial disputes had a much larger impact on the second quarter estimates of labour income than on the third quarter estimates. If the effect of these disputes were removed, labour income would show a deceleration in the third quarter. In the goods-producing industries, wages and salaries rose at the same rate, 2.5%, as in the second quarter. Within this group, wages and salaries in manufacturing slowed markedly while in construction they rebounded from the strike-affected second quarter. The acceleration shown in the service-producing industries, from a 1.7% increase in the second quarter to a 2.2% increase in the third quarter, was due also to the fact that these industries had suffered the effect of severe work stoppages in the second quarter, particularly in the province of Quebec.

Price Movements

The implicit price index of Gross National Expenditure rose 1.4% in the third quarter, a stronger rate of advance than the 0.8% increase in the second quarter. All expenditure components displayed accelerated rates of price increase except prices of exports, which showed virtually no change.

Personal expenditure prices were 1.0% higher in the third quarter, the result of higher prices for non-durable goods attributable to a resurgence of food prices, and a greater concentration of spending on services, rather than goods. The 2.0% increase in the price of government current expenditure is a reflection of the resumption of more normal wage payments, which were low in the second quarter due to strikes. The price of fixed capital expenditures rose 1.6%, compared to 0.9% in the second quarter. This acceleration is centered in construction, rather than machinery and equipment as the former showed a relatively higher price increase accompanied by heavier spending. Higher construction prices can largely be attributed to particularly strong increases in residential building materials, with lumber prices leading the overall advance.

A dampening effect on the overall price rise was created by stable export prices, stemming from a 0.5% decline in the goods component. The price decline in the latter, however, is the result of shifts in expenditure on the goods exported, which can be in part associated with strikes in the transportation, mining and wood manufacturing industries. Import prices, on the other hand, rose 0.7%.

The Government Sector

In the third quarter of 1972, total government expenditures, excluding inter-governmental transfers, continued to rise at about the same rate as in the second quarter—approximately 4%. A major factor in the rise was the increase in purchases of goods and services as wages and salaries rebounded from the strike-affected second quarter. Transfer payments to persons rose less sharply than in the second quarter. Although unemployment insurance continued to increase dramatically as they have during the whole year, the increase was partially offset by declines in old age security benefits from the irregularly high second quarter rate and in grants to post-secondary educational institutions.

(Continued on page 112)

LABOUR FORCE (More detail in Section 4, Table 3)

Between September and October, the employment level increased while unemployment decreased. The unemployment rate declined from 7.1 to 6.9 between those months.

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2.3)

The seasonally adjusted index of industrial production increased by 1.5% in September to reach a level of 195.2 from 194.2 in August. All three components, mining, manufacturing and utilities, contributed to the increase. The main contributor to the change was mining, largely due to strikes recovery in iron ore mining. Elsewhere, in manufacturing and utilities, gains were widespread.

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Section 6, Table 16 and Section 10, Table 1)

Increases in ten of the trade groups surveyed, ranging from a high of 8.4% for shoe stores to a low of 0.5% for men's clothing stores, contributed to the 0.2% overall increase in seasonally adjusted retail sales for September 1972. Largest decreases were reported by fuel dealers and motor vehicle dealers -10.8% and 9.3% respectively.

Seasonally adjusted unit sales of new motor vehicles for September declined 0.6% from the previous month. Effects of decreases in Canadian and U.S. passenger car sales and commercial vehicle sales of 1.2% and 10.4% were moderated by the increase of 12.5% over August in overseas passenger car sales.

EXPORTS AND IMPORTS (More detail in Section 11, Tables 1 and 2)

Exports for August, September and October totalled $5, 022 million, up $111 million from Exports for May, June and July. The U. S., U. K. and Rest of World contributions were $22, -$29 and $118 million. Imports at $4788 million for the same period were $175 million higher. The U. S., U. K. and Rest of World contributions were $147, -$13 and $41 million.

SELECTED ECONOMIC INDICATORS–SEASONALLY ADJUSTED

SELECTED MONTHLY SERIES (More detail in Sections 6; 10; 12; 13; respective Tables 1; 6; 1; 4 & 10.)

Shipments, new orders and unfilled orders increased 1.8%, 2.6% and 2.2% respectively from August to September while the level of owned inventories was virtually unchanged.

Each of the five economic areas continue to show increases in the value of cheques cashed as compared to the corresponding periods of the preceding year. In October forty-three of fifty centres reporting has exceeded their totals of October 1971.

INCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

The pace of economic activity slackened in the third quarter, following a very strong second quarter expansion. The moderation in demand, while widespread, was most evident in the external sector as exports declined sharply. The rise of 0.7 per cent in GNP reflected increasing prices. In volume terms, production showed a 0.7 per cent decline.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

Table 2.3: industrial production,[1] volume indexes (1961 = 100), based on the 1960 standard industrial classification

year and month	index of industrial production	mines (including milling), quarries and oil wells										manufacturing				
		total	metal mines				mineral fuels			non-metals except coal		total	non-durables			
			total	placer gold mines & gold quartz mines	iron	misc. metal mines, n.e.s.	total	coal	crude petroleum and natural gas	total	asbestos		total	foods and beverages		
														total	meat products	dairy products

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and other short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measures of current, capital and reserve movements and embodies all unidentified transactions. [5] Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement.

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: The Labour Force (71-001), Statistics Canada.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001), Statistics Canada.**

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001), Statistics Canada.**

---

[1] Persons who have applied for or are in receipt of unemployment insurance benefit at end of month. [2] Annual figures are annual averages. [3] Prior to July 1971, total includes ordinary, seasonal and fishing benefit. [4] Commencement of new Unemployment Insurance Act. [5] Includes adjustments for cancellation of warrants and collection of overpayments. **Source: Statistical Report on the Operation of the Unemployment Insurance Act (73-001).**

Table 11: time lost in work stoppages[1], based on the 1960 standard industrial classification[2] (thousand man-working days)

year and month					manufacturing

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities.** Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. [3] The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home ownership costs. [4] Indexes for Quebec City and Thunder Bay are on the (1969=100) base. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month						ratio of inventories owned to shipments
						all inventory held				
				owned[3]	held but not owned	total	raw materials	goods in process	finished products

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), Statistics Canada.**

---

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant.
[5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry.

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. **Source: Electric Power Statistics (57-001), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] **By gas utilities, does not include imports.** **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Permits (64-001), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. [2] From January 1972 includes Yukon and the North West Territories. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: New Residential Construction (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1970 and 1971 price indexes are subject to revision. [3] 1971 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), Statistics Canada.**

Note: Components may not add to totals due to rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data excludes consumer indebtedness arising from residential mortgages home-improvement loans and bank loans fully-secured against marketable securities. Figures do not include statistics on interpersonal loans and bills owing to doctors, dentists, lawyers, and other personal service credit as they are not available. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings are treated jointly beginning in January 1970. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in installments. Starting with January 1970 this series affected by transfer of passenger cars financed for commercial purposes from consumer goods to commercial goods; from January 1971 amounts shown exclude unearned finance charges: for December 1970 this change had the effect of reducing the gross figure by 13.5 per cent. [4] Personal cash loans of up to $1,500. made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [5] Personal cash loans of over $1,500. usually repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure by 16.5 per cent. [6] The data for Quebec savings banks loans are not seasonally adjusted as no seasonality is present; this series is repeated in the unadjusted form. [7] Till December 1970 data for only Oil Companies. From first quarter 1971 figures include statistics for transportation and travel and entertainment card-issuing companies. For seasonal adjustment purposes seasonal factors for oil company credit cards were used to adjust the new series other credit card issuers on the assumption that the two series are subject to the same seasonal effects. [8] Bills due for residential/domestic use of telephones, gas and electric power. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, and Dept. of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) (000 tons)	total revenue cars loaded (carload only)	farm products and food						mine products				forest products		
			wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash[2]	coal, sand, cement and other mine products	lumber and plywood	pulpwood	other forest products

[1] Based on weekly (monthly in 1970) carloadings reported by major lines carrying over 99% of railway traffic in Canada. [2] Included in other manufactures and miscellaneous prior to 1970. [3] Includes small tonnage of express traffic not available before 1970. [4] Receipts from U.S. connections not separated from receipts from other Canadian roads before 1970. [5] Data prior to 1970 not comparable with current data. [6] Thousand tons. **Source: Monthly Report, Railway Car Loadings (52-001), (Weekly, Prior to 1970), Railway Freight Traffic (52-002), Statistics Canada.**

[1] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [2] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.**

[1] Includes Class 1 carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [2] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight (53-005) quarterly, Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, Statistics Canada.**

[1] Prior to 1970, figures included the operations of scheduled Canadian air carriers. Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. Note that Nordair is excluded prior to 1970. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Total of foreign funds, short term foreign investments, and other foreign currency assets less foreign currency liabilities. [7] Excluding Canadian day-to-day loans. [8] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [9] Loans to grain dealers and exporters. [10] Loans to finance purchase of Canada Savings Bonds at time of issue. [11] Including loans to instalment finance companies. [12] These series reflect the combination of two CANSIM series.

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does no include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements mad under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercia Failures (61-002) Quarterly, Statistics Canada.**

[1] For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1971-72. **Source: The Canada Gazette.**

National Income and Expenditure Accounts – *(Continued from page 6)*

Total government revenues, after little change in the second quarter, rose by almost 4½% in the third quarter. Much of the rise reflected greater returns from personal income taxes, which rose sharply from a second quarter rate affected by unusually high refunds. Indirect taxes rose due to higher returns from sales taxes and custom import duties. Offsetting these movements was a decline in corporate tax liabilities.

With revenues and expenditures rising at about the same rate, the deficit of the government sector as a whole (on a National Accounts basis and seasonally adjusted at annual rates) changed little in the quarter. The deficit of the federal government narrowed, from $1,420 million to $1,100 million, while those of the provincial and local governments widened.

TABLE 1. National Income and Gross National Product, by Quarters, 1971 and 1972

Seasonally adjusted at annual rates

	1971					1972		
	I	II	III	IV	Year	I	II	III

(Gross National Product at market prices excluding accrued net income of farm operators)	(87,900)	(90,436)	(93,032)	(94,812)	(91,545)	(97,880)	(100,172)	(101,088)

[1] Excludes profits of government business enterprises.

[2] Include the withholding tax applicable to this item.

[3] Includes profits (net of losses) of government business enterprises and other government investment income.

[4] Includes an arbitrary smoothing of crop production, and standard seasonal adjustment for withdrawals of grain from farm stocks and for the change in farm-held livestock and other inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.

[5] Includes net income of independent professional practitioners.

[6] See footnote 4, of Table 2.

TABLE 2. Gross National Expenditure, by Quarters, 1971 and 1972

Change in other farm-held inventories	116	64	84	112	94	44	92	44
Grain in commercial channels	- 52	- 196	- 176	- 164	- 147	- 124	112	- 280

[1] Includes defence expenditures. Details are shown in line 45, Table 16 of the forthcoming publication "National Income and Expenditure Accounts, Third Quarter 1972" (Catalogue 13-001).

[2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure.

[3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings.

[4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (See line 8, Table 1.)

[5] In the seasonally adjusted series, the value of grain crop production in each quarter is taken as one-fourth of the estimated value of crop production for the year as a whole (see footnote 4, Table 1). All other items in the farm inventories series are seasonally adjusted by standard techniques.

TABLE 3. Gross National Expenditure in Constant (1961) Dollars, by Quarters, 1971 and 1972[1]

Seasonally adjusted at annual rates

	1971					1972		
	I	II	III	IV	Year	I	II	III
	$'000,000							
Personal expenditure on consumer goods and services	40,196	41,360	42,008	42,880	41,611	43,212	44,276	44,576

Residual error of estimate	28	332	480	460	325	588	448	680
Gross National Expenditure in constant (1961) dollars	**65,852**	**66,608**	**68,396**	**68,940**	**67,449**	**69,580**	**70,984**	**70,512**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.
